Notes:

-Torque specs for lug nuts number 2 should be set at 40 ft./lbs.

-Nut number 10 should not be fastened tightly. It should only be tight enough to engage the Nyloc nut but also allow the caster (#4) to spin freely. There should be no up and down axial movement in the caster once fastened.

-Bolt & nut numbers 5 & 6 should also not be fastened tightly. They should be tight enough that the bolt has no axial movement side to side but also allow the wheel (#3) to spin freely.
