Block Heater Kit, typical

Applicable Models

- 15/30RES/RESA
- 15/30RYG//REYG
- 38RCL
- 48RCL

Description

The engine block heater kit heats the coolant in the engine block to warm the engine, making starting easier. The block heater turns on automatically when the coolant temperature drops to 38° C (100° F). The heater turns off when the coolant temperature reaches 49° C (120° F).

The engine block heater kit heats engine coolant, making starting easier and warmup quicker. The thermostat, built into the base of the block heater, automatically turns off the heater when coolant temperature reaches 27–38° C (80–100° F).

Model 38RCL and 48RCL generator set engines are equipped with valves that eliminate the need to drain the cooling system before installing the block heater.

- Provides an extra degree of weather protection
- Keeps a generator performing in harsh conditions
