First Time Operating Instructions:

Before use, make sure all packaging labels and materials are removed from the unit. Be sure to keep track of all included parts and pieces before discarding packaging materials. It is advised that you keep the original box and packaging materials in case you need to move or ship the appliance in the future.

Allow the unit to stand for at least 24 hours before you use it; this allows the cooling components time to settle from transit. The instruction manual should be read before use.

Carbon Filter

A built-in carbon filter protects your products by acting as a natural barrier against harmful odors.

Internal Fan

This is an air-cooled unit equipped with an internal fan that maintains a consistent internal temperature.

Note: The carbon filter should be replaced every 3-6 months depending on the unit's exposure level to odor. If the unit is placed in a kitchen, regular replacement every three (3) months is ideal.

Tip: Gather the model and serial number from the product label and write them down before installing the refrigerator.

Installing Your Refrigerator

The refrigerator should be installed in accordance with local electrical code requirements. It should also be placed in a location that is strong enough to support its total weight, keeping in mind that it will weigh substantially more when fully loaded than when empty.

Before you plug the refrigerator into a power supply, be sure to let it stand upright for at least 24 hours to allow the compressor's oils to settle.

Warning: Use two or more people to move and install the refrigerator. Failure to do so can result in back or other injury. Carefully remove the packaging materials. Remove any shipping tape and glue from your refrigerator before use. Do not use sharp instruments, rubbing alcohol, flammable fluids, or abrasive cleaners to remove tape or glue. These products can damage the surface of your refrigerator.

Important: Do not remove any safety, warning, or product information labels from your refrigerator.

TYPES OF INSTALLATION:

This refrigerator has been designed for free-standing or built-in installation. In every case, there must be adequate ventilation and access for service.

Free-standing Installation

A free-standing installation will allow you to install the refrigerator in almost any place you desire. You must follow the stated instructions for electrical requirements and leveling the refrigerator.

Built-in Installation

A recessed installation will allow you to install the refrigerator under a counter or in a kitchen cabinet provided the clearance space requirements around the refrigerator are followed. It is necessary to allow adequate ventilation space around the unit (make sure there is at least some ventilation room for the back of the unit). The following additional items must be observed:

1. Place the refrigerator in front of the installation location.
2. Adjust the feet and place the unit flat on the floor or on a platform depending on your installation requirements.
3. If the electrical outlet for the refrigerator is behind the cabinet, plug in the refrigerator.
4. Push the refrigerator into position.

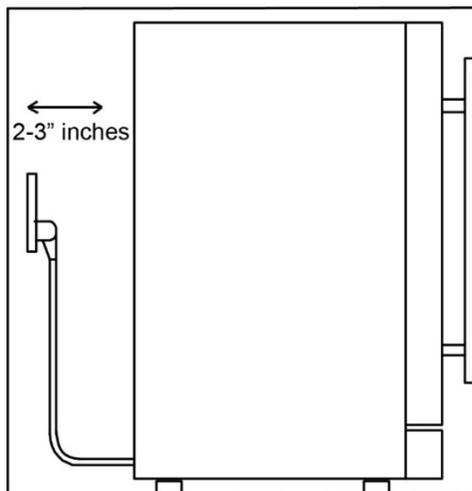

Warning: DO NOT install the refrigerator behind a closed cabinet door.

Installation Clearance Requirements:

When installing the refrigerator under a counter, follow the recommended spacing dimensions shown.

- To ensure proper service access and ventilation, allow between 2 - 3 inches of clearance at the back as shown in the diagram.
- The installation should allow the unit to be pulled forward for servicing, if necessary.
- A standard electrical supply (115 VAC only, 60 Hz), properly grounded in accordance with National Electrical Code and local codes and ordinances, is required.

Important: Once you are ready to install the unit in a cabinet or directly on the floor, you must adjust the feet to level the refrigerator.

LEVELING:

The refrigerator should be installed on a firm and level surface that will be able to support the entire weight of a fully loaded unit. It is important for the refrigerator to be leveled in order to work properly. It can be raised or lowered by rotating the plastic sheaths around each of the feet on the bottom of the machine. If you find that the surface is not level, rotate the feet until the refrigerator becomes level. You may need to make several adjustments to level it. We recommend using a carpenter's level to check the machine. Turn the leveling feet to the right to lower that side of the refrigerator. Turn the leveling feet to the left to raise that side of the refrigerator.

RECOMMENDED GROUNDING METHOD:

For your personal safety, this appliance must be grounded. It is equipped with a power supply cord having a 3-prong grounding plug. To minimize possible shock hazard, the cord must be plugged into a mating 3-pronged wall socket, and grounded in accordance with the National Electrical Code and local codes and ordinances. If a mating wall socket is not available, it is the personal responsibility of the customer to have a properly grounded, 3-prong wall receptacle installed by a qualified electrician.

Electrical Shock Hazard!

- Plug into a grounded 3-prong outlet.
- Never remove the grounding prong from the plug.
- Never use an adapter to bypass the grounding prong.
- DO NOT use an extension cord.
- Failure to follow these instructions can result in fire, electrical shock, or personal injury.

Before you move your refrigerator into its final location, it is important to make sure you have the proper electrical connection. A standard electrical supply (115 V, 60Hz), properly grounded in accordance with the National Electrical Code and local codes and ordinances, is required. It is recommended that a separate circuit, serving only your refrigerator, be provided. Use receptacles that cannot be turned off by a switch or pull chain.

The fuse (or circuit breaker) size should be 15 Amps.

Installing Your Door Handle and Shelves

INSTALLING THE DOOR HANDLE:

1. Open the door and carefully pull the door gasket around the area where the handle is to be installed.
2. Insert each Phillips head screw through the gasket side of the door until the screw passes through the door.
3. Align the handle with the screws and tighten using a Phillips head screwdriver until the handle is flush against the door frame.

Caution: Do not over-tighten the screws as this may cause damage to the handle or to the stainless steel door.

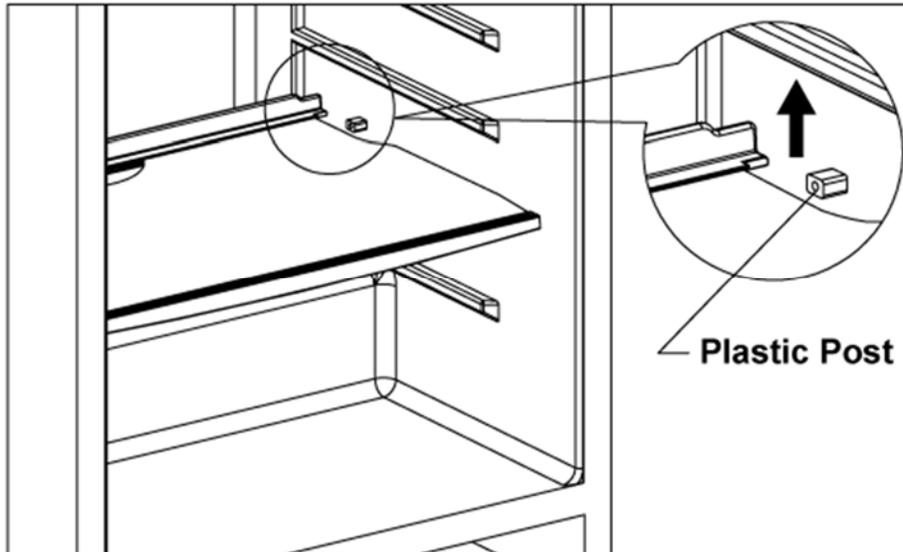

4. Carefully press the door gasket into its original position.

INSTALLING THE SHELVES:

1. Open the door completely.
2. Ensure that the plastic posts are installed on the left and right sides of the shelf track onto which you are attempting to install the shelf.
3. Lifting the rear of the shelf upwards above the shelf track, align the cutouts in the left and right sides of the shelves over the plastic posts mounted to the inner cabinet.
4. Gently set the shelf down on the shelf track.

REMOVING THE SHELVES:

1. Open the door completely.
2. Remove all of the contents loaded on the shelf, if applicable.
3. With the shelf pushed all the way to the rear of the unit, position the cutouts in the left & right sides of the shelves under the plastic posts on each side of the shelf track.
4. Push down on the front of the shelf while lifting up on the rear of the shelf (picture a seesawing motion) until the shelf passes over the plastic posts.
5. Pull the shelf towards the front of the unit until it is completely removed from the inner compartment.

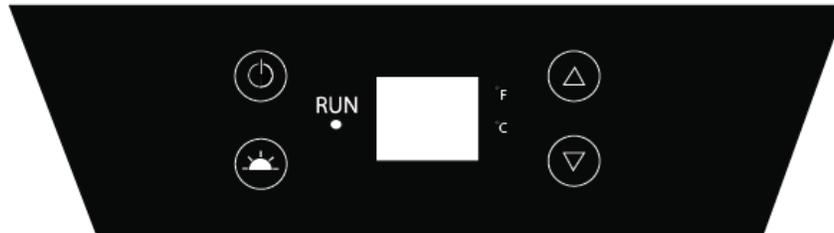

Tip: To prevent damaging the door gasket, make sure to open the door fully before pulling the shelves out of their track.

INSTALLATION CHECK-LIST BEFORE OPERATION:

1. Have all packing materials and tape been removed from the interior and exterior of the refrigerator?
2. Have the installation instructions been followed, including connecting the machine to electricity?
3. Has proper grounding been installed for the refrigerator?
4. Has the machine been leveled?
5. Is there a clearance of at least 2" to 3" at the rear for proper air circulation?

USING YOUR CONTROL PANEL:

This refrigerator has a temperature range from 34° F to 50° F.

Power Button

Press and hold this button down for three seconds to power your unit on. Once pressed, the “Run” indicator light will illuminate to indicate the unit is on and running. Press and hold this button for three seconds again and the unit will power off and the “Run” Indicator light will turn off.

Increase Temperature

Press this button to increase the temperature by one (1) degree increments. 50° F is the highest available temperature on this unit.

Decrease Temperature

Press this button to decrease the temperature by one (1) degree increments. 34° F is the lowest available temperature on this unit.

Interior Light

Press this button to alternate between the two internal light colors: blue and white. Please refer to the “Internal Light” section on the next page for further details.

Note: Pressing and holding the increase and decrease temperature buttons at the same time will switch the temperature display from °F to °C.

Tip: If you powered the unit off, please wait at least five (5) minutes before powering it back on.

Warning: Allow at least 24 hours for your refrigerator to run before use to allow the temperature to acclimate. Whether your refrigerator can reach the actual set temperature depends on the ambient environmental conditions.

Internal Light

This refrigerator is equipped with top and side internal lights that can be set to a blue or white color. The internal lights will illuminate when the door is open and turn off when the door is closed.

Note: Every unit is run tested at the factory. Because of this, your model may default to either a blue or white light setting out of the box.

The automatic light feature is triggered by a sensor located on the front vent. This sensor allows the refrigerator to recognize when the door is open or closed.

Defrosting

Note that under most refrigerating settings, the unit will automatically defrost under most ambient conditions. However, on colder settings, some frost may build up. Additionally, the more humid the ambient conditions, the more frost may build up. Keep the door closed as much as possible and avoid opening the door unnecessarily to minimize frost build-up.

If frost is preventing the door from closing properly, you may need to power the unit off until the frost melts. Use a soft absorbent towel to dry the unit.

Warning: Never attempt to remove frost with a sharp object.

Normal Sounds

Your new refrigerator may make sounds that are not familiar to you. Most of the new sounds are normal. Hard surfaces like the floor or walls can make the sounds seem louder than they actually are. The following describes the kinds of sounds that might be new to you and what may be making them.

- Rattling noises may come from the flow of the refrigerant or the water line.
- Items stored on top of the refrigerator can also make noises.
- The high efficiency compressor may make a pulsating or high-pitched sound.
- The internal fan will run frequently to create a consistent internal temperature environment.
- Water running from the evaporator to the water bin may make a splashing sound.
- As each cycle ends, you may hear a gurgling sound due to the refrigerant flowing in your refrigerator.
- You may hear air being forced over the condenser by the condenser fan.

Cleaning and Maintenance

Periodic cleaning and proper maintenance will ensure efficiency, top performance, and long life.

INTERIOR CLEANING:

1. Disconnect power to the unit.
2. Open the door and remove the contents and shelves.
3. Wait until the unit defrosts.
4. With a clean cloth, wipe down the interior of the unit.
5. Reinsert the shelves and contents.
6. Reconnect power to the unit.

EXTERIOR CLEANING:

The door and cabinet may be cleaned with a mild detergent and lukewarm water solution such as two (2) tablespoons of baking soda to one (1) quart of water. Do not use solvent based or abrasive cleaners. Use a soft sponge and rinse with clean water. Wipe with a soft clean towel to prevent water spotting. If the door panel is stainless steel, it can discolor when exposed to chlorine gas and moisture. Clean stainless steel with a cloth dampened with a mild detergent and warm water solution. Never use an abrasive or caustic cleaning agent.

Preparing Your Refrigerator for Storage

If the refrigerator will not be used for a long time, or is to be moved to another place, it will be necessary to defrost the unit and dry the interior.

1. Disconnect the refrigerator from the power supply by removing the power plug from the wall socket.
2. Leave the door open to allow for air circulation and to prevent mold, mildew, and unpleasant smells.
3. Once the interior is dry and clean the unit will be ready for storage.

Caution: Store the unit out of the reach of children. If you have children, you may want to take additional precautions such as removing the door to prevent a child from being trapped inside the refrigerator.

Important: Do NOT touch the power plug when your hands are wet. NEVER unplug the unit by pulling the plug.
