1 Important Safety Instructions

SAVE THESE INSTRUCTIONS.

This manual contains important instructions for the generator set. Follow these instructions during installation, operation, and maintenance of the generator set and batteries.

Thoroughly read the Operator Manual before operating the generator set. Safe operation and top performance can only be obtained when the equipment is properly operated and maintained.

1.1 Warning, Caution, and Note Styles Used in This Manual

The following safety styles and symbols found throughout this manual indicate potentially hazardous conditions to the operator, service personnel, or equipment.

▲ DANGER

Indicates a hazardous situation that, if not avoided, will result in death or serious injury.

▲ WARNING

Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

▲ CAUTION

Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.

NOTICE

Indicates information considered important, but not hazard-related (e.g., messages relating to property damage).

1.2 General Information

This manual should form part of the documentation package supplied by Cummins Power Generation with specific generator sets. In the event that this manual has been supplied in isolation please contact your authorized dealer.

NOTICE

It is in the operator's interest to read and understand all warnings and cautions contained in the documentation relevant to the generator set operation and daily maintenance.

1.3 General Precautions

- Keep ABC fire extinguishers accessible.
- Make sure that all fasteners are secure and torqued properly.
- Keep the generator set and its compartment clean. Do not store any items in the generator set compartment.
- Before working on the generator set, make sure the generator set is shut down and disabled.
 - 1. Press the generator set's "O" (Off) button to stop the generator set. Allow the generator set to thoroughly cool to the touch.
 - 2. If applicable, turn off and disconnect the battery charger from the AC source before disconnecting the battery cables.
 - 3. Disconnect the negative (–) cable from the battery and secure it from contacting the battery terminals to prevent accidental starting.
- Use caution when making adjustments when the generator set is running, hot, or when parts are electrically live, as all situations may cause personal injury or death.
- Used engine oil has been identified by some state and federal agencies as causing cancer or reproductive toxicity. Do not ingest, inhale, or come into contact with used oil or its vapors.
- Do not work on the generator set when mentally or physically fatigued or after consuming alcohol or drugs.

NOTICE

Only trained and authorized personnel shall maintain or service the generator set.

NOTICE

The installation of the generator set shall provide enough ventilation to ensure that gases generated by vented batteries during charging, or caused by equipment malfunction, are removed.

General Safety Precautions

Hot Pressurized Liquid

Contact with hot liquid can cause severe burns.

Do not open the pressure cap while the engine is running. Let the engine cool down before removing the cap. Turn the cap slowly and do not open it fully until the pressure has been relieved.

Moving Parts

Moving parts can cause severe personal injury.

Use extreme caution around moving parts. All guards must be properly fastened to prevent unintended contact.

Toxic Hazard

Used engine oils have been identified by some state and federal agencies to cause cancer or reproductive toxicity.

Do not ingest, breathe the fumes, or contact used oil when checking or changing engine oil. Wear protective gloves and face guard.

Electrical Generating Equipment

Incorrect operation and maintenance can result in severe personal injury or death.

Do not operate equipment when fatigued, or after consuming any alcohol or drug.

Make sure that only suitably trained and experienced service personnel perform electrical and/or mechanical service.

Toxic Gases

Substances in exhaust gases have been identified by some state and federal agencies to cause cancer or reproductive toxicity.

Do not breathe in or come into contact with exhaust gases.

⚠ WARNING

High Noise Level

Generator sets in operation emit noise, which can cause hearing damage. Wear appropriate ear protection at all times.

▲ WARNING

Hot Surfaces

Contact with hot surfaces can cause severe burns.

Wear appropriate PPE when working on hot equipment and avoid contact with hot surfaces.

Toxic Hazard

Ethylene glycol, used as an engine coolant, is toxic to humans and animals. Wear appropriate PPE. Clean up coolant spills and dispose of used coolant in accordance with local environmental regulations.

⚠ WARNING

Combustible Liquid

Ignition of combustible liquids is a fire or explosion hazard which can cause severe burns or death.

Do not store fuel, cleaners, oil, etc., near the generator set. Do not use combustible liquids like ether.

⚠ WARNING

Combustible Gases

Generator sets in operation have combustible gases under pressure, which if ignited can cause eye and ear damage.

Wear appropriate eye and ear protection at all times.

Combustible Gases

Generator sets in operation have combustible gases under pressure, which if ignited can cause severe injury.

Do not operate the generator set with any doors open.

Fire Hazard

Materials drawn into the generator set, as well as accumulated grease and oil, are a fire hazard. Fire can cause severe burns or death.

Keep the generator set and the surrounding area clean and free from obstructions. Make sure the generator set is mounted in a manner to prevent combustible materials from accumulating under the unit.

Automated Machinery

Accidental or remote starting of the generator set can cause severe personal injury or death.

Isolate all auxiliary supplies and use an insulated wrench to disconnect the starting battery cables (negative [–] first).

NOTICE

Keep multi-class ABC fire extinguishers handy. Class A fires involve ordinary combustible materials such as wood and cloth. Class B fires involve combustible and flammable liquid fuels and gaseous fuels. Class C fires involve live electrical equipment. (Refer to NFPA No. 10 in applicable region.)

NOTICE

Before performing maintenance and service procedures on enclosed generator sets, make sure the service access doors are secured open.

NOTICE

Stepping on the generator set can cause parts to bend or break, leading to electrical shorts, or to fuel, coolant, or exhaust leaks. Do not step on the generator set when entering or leaving the generator set room.

1.4 Generator Set Voltage Is Deadly

- Generator set output connections must be made by a trained and experienced electrician in accordance with all applicable codes.
- This generator set and the public utility may only be connected to house circuits by means of the automatic transfer switch.

Improper connections can lead to electrocution of utility workers and damage to equipment. Make sure that the connections are installed properly by a trained technician.

• Use caution when working on live electrical equipment. Remove jewelry, and make sure clothing and shoes are dry. Stand on a dry wooden platform.

1.5 Engine Exhaust Is Deadly

• See <u>The Hazards of Carbon Monoxide</u> to learn the symptoms of Carbon Monoxide poisoning.

• Locate the generator set away from doors, windows, other openings into the house, and where exhaust gases will disperse away from the house.

1.6 Fuel and Fumes Are Flammable

Fire, explosion, and personal injury or death can result from improper practices.

- Do not fill fuel tanks while the engine is running unless the tanks are outside the engine compartment. Fuel contact with hot engine or exhaust is a potential fire hazard.
- Do not permit any flame, cigarette, pilot light, spark, arcing equipment, or other ignition source near the generator set or fuel tank.
- Fuel lines must be adequately secured and free of leaks. Fuel connection at the engine should be made with an approved flexible line. Do not use copper piping on flexible lines as copper will become brittle if continuously vibrated or repeatedly bent.
- Make sure all fuel supplies have a positive shutoff valve.
- Make sure the battery area has been well-ventilated prior to servicing near it. Lead-acid batteries emit a highly explosive hydrogen gas that can be ignited by arcing, sparking, smoking, etc.

1.7 Batteries Can Explode

Batteries can explode, causing severe skin and eye burns and can release toxic electrolytes.

⚠ WARNING

Combustible Gases

Batteries can explode, causing severe skin and eye burns, and can release toxic electrolytes.

Do not dispose of the battery in a fire, because it is capable of exploding. Do not open or mutilate the battery.

⚠ WARNING

Electric Shock Hazard

Batteries present the risk to high short circuit current.

Remove watches, rings, or other metal objects. Use tools with insulated handles.

NOTICE

Servicing of batteries is to be performed or supervised by personnel knowledgeable of batteries and the required precautions. Keep unauthorized personnel away from batteries.

NOTICE

- Wear safety glasses.
- Do not smoke.
- To prevent arcing when disconnecting the battery:
 - 1. Press the Stop switch.
 - 2. Disconnect AC power from any battery chargers.
 - 3. Remove the negative (-) battery cable to prevent starting.
- To prevent arcing when reconnecting the battery:
 - 1. Reconnect the positive (+) cable.
 - 2. Reconnect the negative (-) cable.
 - 3. Reconnect the battery charger to AC power supply.
- When replacing the generator set battery, always replace it with a battery as specified in this manual.

1.8 Vented Batteries

⚠ WARNING

Toxic Hazard

The electrolyte in vented batteries is a dilute sulfuric acid that is harmful to the skin and eyes. It is also electrically conductive and corrosive. Always:

- 1. Wear full eye protection and protective clothing;
- 2. If the electrolyte contacts the skin, wash it off immediately with water;
- 3. If the electrolyte contacts the eyes, flush them thoroughly and immediately with water and seek medical attention; and
- 4. Wash spilled electrolyte down with an acid neutralizing agent. A common practice is to use a solution of one pound (500 grams) bicarbonate of soda (also known as baking soda or sodium bicarbonate) to one gallon (4 liters) of water.
- 5. Continue to add the bicarbonate of soda solution until the evidence of reaction (that is, foaming) has stopped.
- 6. Flush the resulting liquid with water and dry the area.

1.9 Moving Parts Can Cause Severe Personal Injury or Death

- Do not wear loose clothing or jewelry near moving parts, such as fans.
- Keep hands away from moving parts.
- Keep guards in place over fans.

1.10 The Hazards of Carbon Monoxide

Carbon monoxide (CO) is an odorless, colorless, tasteless and non-irritating gas. You cannot see it or smell it. Red blood cells, however, have a greater affinity for CO than for oxygen. Therefore, exposure even to low levels of CO for a prolonged period can lead to asphyxiation (lack of oxygen) resulting in death. Mild effects of CO poisoning include eye irritation, dizziness, headaches, fatigue and the inability to think clearly. More extreme symptoms include vomiting, seizures and collapse.

Engine-driven generator sets produce harmful levels of carbon monoxide that can injure or kill you.

What Is Carbon Monoxide Poisoning?

Carbon Monoxide (CO) is an odorless, colorless, tasteless and non-irritating gas. You cannot see it or smell it. Red blood cells, however, have a greater affinity for CO than for Oxygen. Therefore, exposure even to low levels of CO for a prolonged period can lead to asphyxiation (lack of Oxygen) resulting in death. Mild effects of CO poisoning include eye irritation, dizziness, headaches, fatigue and the inability to think clearly. More extreme symptoms include vomiting, seizures and collapse.

Protecting Yourself from CO Poisoning

- Locate the generator set in an area where there are no windows, doors, or other access points into the home.
- Make sure all CO detectors are installed and working properly.
- Pay attention for signs of CO poisoning.
- Check the exhaust system for corrosion, obstruction, and leaks every time you start the generator set and every eight hours when you run it continuously.

2 Introduction

This generator set is intended for stationary installation for emergency use only.

2.1 About This Manual

This manual is a guide for the installation of the generator set models listed on the front cover. Proper installation is essential for top performance, reliable operation, and safety. Read through this manual before starting the installation. This manual covers outdoor applications only. For other applications, such as indoor applications, contact your local Cummins dealer or reference the Application Manual at the following link: *http://www.cumminspower.com/www/literature/applicationmanuals/t030.pdf*

NOTICE

The installation must comply with all applicable building codes.

See the generator set's specific Operator Manual for operation and maintenance and specific Service Manual for service.

NOTICE

Manuals are updated from time to time to reflect changes in the equipment and its specifications. The most up-to-date version of this manual is found on the QuickServe website

(https://quickserve.cummins.com/info/index.html).

2.2 Related Literature

Before any attempt is made to operate the generator set, the operator should take time to read all of the manuals supplied with the generator set, and to familiarize themselves with the warnings and operating procedures.

The literature provided with the generator set is as follows:

- Operator Manual (A051X877)
- Installation Manual (A051X873)

NOTICE

A generator set must be operated and maintained properly if you are to expect safe and reliable operation. The Operator manual includes a maintenance schedule and a troubleshooting guide.

The Health and Safety manual must be read in conjunction with this manual for the safe operation of the generator set:

- Health and Safety Manual (0908-0110)
- Warranty Statement (A028U870)
- C45 N6, C50 N6 and C60 N6 models only: Emissions Component Defect Warranty Statement (A028X278)
- C70 N6, C80 N6 and C100 N6 models only: Emissions Component Defect Warranty Statement (A028X279)

The relevant manuals appropriate to your generator set are also available. The documents below are in English:

- Service Manual (A051X880)
- Parts Manual (A051X891)
- EControls, Inc., Global Control Platform (GCP) Software Service Manual (A035C596)
- EControls, Inc., 4G Software Service Manual (A052G032)
- EControls, Inc., GCP Engine Display Interface Software (EDIS) Training Manual (A035C608)
- EControls, Inc., 4G Software Operator Manual (A052G024)
- Engine Operation & Maintenance Manual for QSJ5.9G (4388606)
- RA Series Transfer Switch Owner Manual (A046S594) if applicable
- PowerCommand® 1302 Controller Owner's Manual (900-0661)
- Service Tool Manual (A043D529)
- Standard Repair Times HL Family (A053K365)
- T-030: Liquid Cooled Generator Set Application Manual (A040S369) for application information

2.3 Before Installation

Before beginning the installation of the generator set, verify that the unit was correctly selected. Check the following features:

- Model
- Specifications
- Options
- Fuel Supply

2.4 Model Specifications

NOTICE

Damage caused by failure to follow the manufacturer's recommendation will not be covered by the warranty. Please contact your authorized distributor.

TABLE 1. 5.9L MODEL VARIATIONS

| Models | Description |
|---|-----------------|
| C45 N6, C50 N6, C60 N6, C70 N6, C80 N6, C100 N6 | 60 Hz, 1800 RPM |

TABLE 2. COLD WEATHER SPECIFICATIONS (ALL MODELS)

| Temperature | emperature Description | | | | | |
|--|--|----------|----|--|--|--|
| Above 40 °F (4 °C) | Battery charger | Standard | 34 | | | |
| 0 to 40 °F (-17 to 4 °C) | Battery charger, coolant heater (1000W), CCV heater ¹ | Standard | 34 | | | |
| Below 0 °F (-17 °C) | Battery charger, coolant heater (1500W), oil heater, battery heater, CCV heater ¹ , cold weather starter ² | Larger | 4D | | | |
| ¹ CCV heaters are provided as part of the cold and extreme cold coolant heater packages. ² The cold weather starter is provided as part of the extreme cold coolant heater package. | | | | | | |

NOTICE For NFPA 110 applications, a coolant heater is required. A factory option is available.

TABLE 3. FUEL SPECIFICATIONS 60 HZ, 1800 RPM

| Туре | Unit | C45 N6 | C50 N6 | C60 N6 | C70 N6 | C80 N6 | C100 N6 |

| Pressure | Maximum pressure under any condition: 13 inch water column (3.2 kPa) | | | | | | | |

TABLE 4. ENGINE SPECIFICATIONS (ALL MODELS)

| Туре | Specification | | | |
|---|--|--|--|--|
| Engine | 6 cylinder-in-line, single-cam, liquid-cooled, 4-stroke, spark ignited | | | |
| Bore | 4.02 in (102 mm) | | | |
| Stroke | 4.72 in (120 mm) | | | |
| Displacement | 359 in ³ (5.88 L) | | | |
| Compression Ratio (Natural Gas & LPG) | 8.5:1 | | | |
| Firing Order | 1-5-3-6-2-4 | | | |
| Spark Plug Gap 45, 50, 60 kW) | 0.020 in (0.508 mm) | | | |
| Spark Plug Gap (70, 80, 100 kW) | 0.016 in (0.40 mm) | | | |
| Spark Plug Torque | 28 ft-lb (38 Nm) | | | |
| Crankshaft Rotation (Viewed from the Front of the Engine) | Clockwise | | | |
| Engine Weight (Dry, Long Block Only) | 911 lb (413 kg) | | | |
| Valve Clearance (Intake) | 0.012 in (0.305 mm) | | | |
| Valve Clearance (Exhaust) | 0.024 in (0.610 mm) | | | |
| Coolant | 50/50 coolant solution (50% pure water and 50% anti- freeze) | | | |
| | 4.23 gallons (16 L) capacity | | | |
| Oil Capacity | 4 gallons (15 L) | | | |

| Туре | Specification |
|---------------|---|
| | Must adhere to Cummins[®] Engineering Standard (CES) 20074 |
| | Use of improper oils can result in engine damage. Use only the required oils: |
| | 5W-40 (all ambient temperatures) |
| Oil Standards | 15W-40 (<i>above</i> 40 °F [4 °C] ambient temperature) (use of GEO 15W-40 oil in ambient temperatures <i>below</i> 40 °F [4 °C] could result in engine turbocharger damage) |
| | A sulfated ash limit of 0.6% mass has been placed on all engine lubricating oils recommended for use in Cummins® B, natural gas engines. Higher ash oils can cause valve and/or piston damage, cause spark plug fouling, and lead to excessive oil consumption and degradation of the catalyst. |

TABLE 5. GENERATOR SET SIZE SPECIFICATIONS

| Enclosure Type | Size (L x W x H) |
|-------------------|---|
| Open/Weather | 98 x 40 x 58 in (2489 x 1016 x 1473 mm); does not include exhaust discharge elbow |
| Sound Level 1 | 119 x 40 x 58 in (3023 x 1016 x 1473 mm) |
| Sound Level 2 | 136 x 40 x 58 in (3454 x 1016 x 1473 mm) |

3 Pre-Installation Considerations

Areas of consideration:

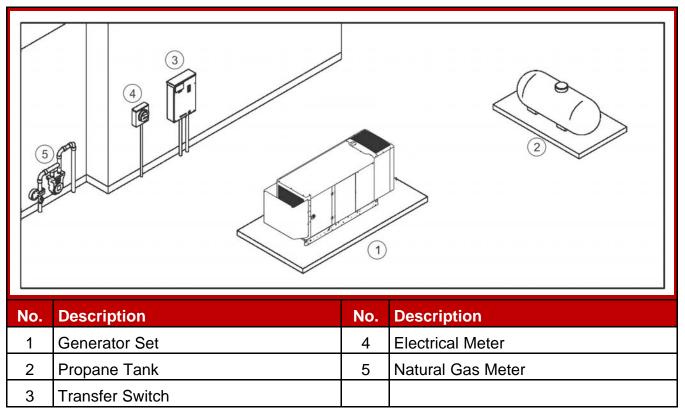

FIGURE 1. SITE PREPARATION EXAMPLE

- Location of the generator set this is one of the first decisions to be made, as it affects all other aspects of the installation, such as:
 - Length of electric wiring
 - Length of gas lines (natural gas or propane both must be inspected by the gas utility inspectors and building inspectors)
 - Site preparation:
 - Access to the site
 - Trenches
 - Site preparation materials needed
- Fuel supply pressure
- Automatic transfer switch location and connections
- Tools and materials required

- Minimum distance from the propane tank fill (verify the legal minimum distance with local code officials)
- Accessories required (if any) for the customer's application (utility power may be required at the generator set; make plans accordingly)

NOTICE

Depending on the locality and use of the generator set, it may be necessary to obtain an air quality emissions permit before installation begins. Check with local pollution control or air quality authority to determine permit requirements.

3.2 Installation Codes and Standards for Safety

NOTICE

The generator set installer bears sole responsibility for following all applicable local codes and regulations.

The following list of codes and standards may apply to the installation and operation of the generator set. This list is for reference only and not intended to be inclusive of all applicable codes and standards. The address of each agency is listed so that copies of the codes may be obtained for reference. Installation codes and recommendations are subject to change, and may vary by location or over time.

TABLE 12. INSTALLATION CODES AND STANDARDS FOR SAFETYRECOMMENDATIONS

| Code or Standard | Organization |
|---|--|
| NFPA 70 - National Electrical Code NFPA 37 - Installation and Use of Stationary Combustion Engines and Gas Turbines NFPA 54 - National Fuel Gas Code NFPA 58 - Storage and Handling of Liquefied Petroleum Gases NFPA 110 - Standard for Emergency and Standby Power Systems | National Fire Protection Association 470 Atlantic Avenue Boston, MA 02210 |
| CSA Electrical Bulletin CSA 22.1 Canadian Electrical Code CSA B149 CSA C22.2 No. 100 CSA C22.2 No. 14 | Canadian Standards Association Housing and Construction Materials Section 178 Rexdale Blvd. Rexdale, Ontario, Canada M9Q 1R3 |

| Code or Standard | Organization |
|---|---|
| California Administrative Code - Title 25 Chapter 3 | State of California Documents Section P.O. Box 1015 |
| | North Highlands, CA 95660 |

3.3 Required Items for Installation

Tools and materials are used for the installation of this generator set. These items are identified in the following sections. Please refer to local codes and standards, because they may affect the materials required.

Materials Required

NOTICE

Refer to local codes and standards, which may affect material requirements.

NOTICE

If a 100% rated breaker is used, 90 °C wire must be used for L1, L2, and L3 with the wire size determined by the 75 °C ampacity tables. Aluminum wire is not allowed with 100% rated breakers.

NOTICE

A UL-listed grounding electrode terminal within its ratings and suitable for the application must be installed and labeled "Grounding Electrode Terminal".

Electrical Materials:

NOTICE Class 1 wiring methods must be used for connecting the generator set.

- Four code compliant AC power wires; L1, L2, N and Gnd (add another wire for 3-phase for a total of 5 AC wires)
- If an RA automatic transfer switch will be installed, refer to the RA Series Transfer Switch Owner Manual.
- Wire sizes (DC control and power and AC sense only):
 - DC control or AC sense wires under 1000 feet circuit length => 18-14 AWG of the insulation type below

- DC control or AC sense wires 1000-2000 feet circuit length => 16-14 AWG of the insulation type below
- All AC and DC wires and cables must be rated 75 °C minimum, stranded copper, and rated for wet locations.
 - For wire sizes 14 AWG and larger, use insulation types: RHW, RHW-2, THHW, THW, THW-2, THWN, THWN-2, XHHW, XHHW-2, USE-2, ZW-2
 - For wire sizes 16 and 18 AWG, use insulation types: FFH-2, KFF-2, PAFF, PFF, PGFF, PTFF, RFH-2, RFHH-2, RFHH-3, SFF-2, TFF, TFFN, ZFF
- Code compliant 20 A, 120 VAC, GFCI protected circuit for alternator heaters, battery charger, coolant heater, oil heater, and/or battery heater (if equipped)
- Code compliant conduit for all wires

Mounting Materials:

• Four base tie-down bolts

NOTICE

Seismic zone installations require compliance to specific mounting configurations.

Fuel Materials:

- Flexible fuel line (provided with generator)
- UL listed pipe thread sealant
- Fuel line (natural gas and propane: 6 12 inch water column [1.5 3.0 kPa] fuel pressure) at generator set
- Fuel pressure regulator (as required)
- Manual fuel shut-off at generator set ahead of automatic valves on generator set fuel system

Loose Parts Shipped With the Generator

The following loose parts are shipped with the generator set:

- Flexible fuel hose assembly
- Two enclosure keys (where applicable)
- Battery tie-down
- Sound level 2 baffle (where applicable)
- Weather enclosure exhaust elbow (where applicable)
- Literature (Operator Manual, Installation Manual, Health and Safety Manual, and Warranty Statements)

4 Installation

NOTICE

The installer is responsible for complying with all applicable installation codes and safety requirements. See the Installation Codes and Standards for Safety section of this manual for more information.

The following sections cover a step-by-step overview of a typical generator set installation.

Review these sections to become familiar with specific procedures and important safety precautions before beginning the installation.

4.1 Site Assessment and Preparation

Proper component location and site preparation have a very important impact on completing a successful installation. The major components and sources of power needed for installation include the following items:

- Generator set
- Transfer switch
- Electrical utility
- Fuel source: natural gas or propane vapor
- Accessories (may be required under certain conditions)

Picking a Location

⚠ WARNING

Exhaust gas is deadly. Locate the generator set away from doors, windows, and other openings to the house and where exhaust gases will disperse away from the house.

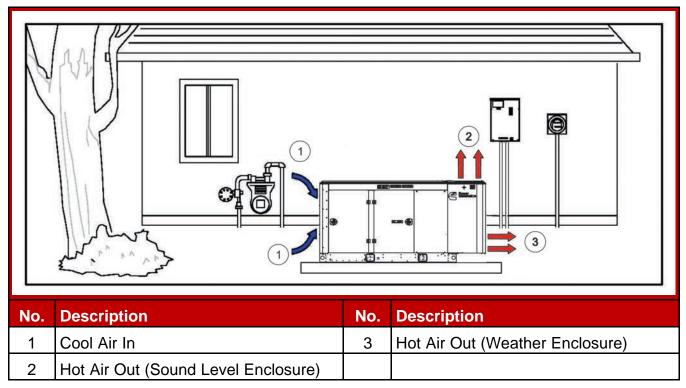

FIGURE 2. GENERATOR SET LOCATION

The generator set location is critical for safety and performance. Follow the guidelines below:

- Must comply with applicable codes (NFPA, NEC, IBC, etc.).
- This manual only covers outdoor installations with Cummins factory installed enclosures. For other installation types, contact your local Cummins dealer or reference the Application Manual at the following link: *http://www.cumminspower.com/www/literature/applicationmanuals/t030.pdf*
- Consider access to utilities (electric meters, transfer switch, remote fuel tank location, etc.).
- Call the local utilities to mark the locations of buried utility services (gas, electric, or telephone) before digging.
- Verify the locations of any other buried components (gas, electric or telephone) with the homeowner before digging.

Follow the clearance guidelines below:

- The exhaust side of the generator set must be located 5 feet from combustible materials (NFPA 37).
- The exhaust side of the generator must be located 5 feet from any opening in a wall (window, door, vent, etc.).
- The generator must be located such that the exhaust is not able to accumulate in an occupied area.

- The generator must have enough room for installation, service, and maintenance.
- The generator must be located to ensure ventilation openings are not blocked.
- Position the generator set so that cooling air is free to enter and leave the area.
- Locate and position the generator set so that prevailing winds carry exhaust gases and potential fuel leaks away from the house or occupied area.

Laying the Foundation

When laying the foundation:

- 1. Clear obstructions, and make sure that there is adequate clearance for access.
- 2. Level the ground, and make sure that the ground is compact and settled. Ensure that it is stable ground, not subject to flooding.
- 3. Prepare the concrete pad.
 - The pad should be constructed of reinforced concrete with a 28-day compressive strength of at least 2500 psi (17,237 kPa).
 - The pad should be at least 5 in (127 mm) deep and extend at least 6 in (150 mm) beyond the skid on all sides.

 NOTICE

 Refer to the foundation drawing for stub-up dimensions.

 NOTICE

 Seismic installation may require a different pad and securing devices.

 NOTICE

Local codes and standards may have different requirements.

4. Lift the generator set onto the pad, and secure it.

| | | 9 | |
|-----|---|-----|--|
| No. | Description | No. | Description |
| 1 | Pad Length (Must Extend Minimum 6 in Beyond Skid) | 6 | Circuit Breaker 3 Stub-Up (Optional) |
| 2 | Pad Width (Must Extend Minimum 6 in Beyond Skid) | 7 | 5 ft Clearance (Shaded Area) |
| 3 | Pad Thickness (Minimum 5 in) | 8 | Accessory 120 VAC, 20A Max Wire Stub-Up |
| 4 | Circuit Breaker 1 Stub-Up | 9 | Generator Set Control Wire Stub-Up |
| | | | (DC) |

FIGURE 3. CONCRETE PAD PREPARATION

Lifting and Moving the Generator Set

Heavy Load

The generator set is heavy. Handle with care.

Use appropriate lifting techniques to move the generator set. Do not use the lifting eyes on the engine and alternator to lift the entire generator set. Dropping the generator set can cause severe personal injury or death. Keep feet and hands clear when lifting the generator set.

▲ CAUTION

The generator set is shipped with oil in the engine crankcase. Keep the generator set upright.

Mounting the Generator Set

Mount the generator set on a substantial and level base such as a concrete pad. A non-combustible material must be used for the pad. Verify that the mounting pad is level lengthwise, widthwise, and diagonally.

NOTICE

Seismic installation may require specific anchorage.

4.2 Fuel Selection and Fuel System Connection

For fuel specifications (such as BTU/hr), see the Model Specifications section.

NOTICE

This generator set has a convertible fuel system. The generator may run on natural gas or propane, depending on the preferences of the owner. All generator sets come preconfigured from the factory for natural gas fuel. For more information on converting the fuel system type, refer to the Service Manual.

NOTICE

Fuel systems must be installed by qualified service technicians. Improper installation presents hazards of fire and improper operation, resulting in severe personal injury or property damage.

▲ WARNING

Gaseous fuels are flammable, explosive, and can cause severe personal injury or death. Do not smoke if you smell gas, are near fuel tanks for fuelburning equipment, or are in an area sharing ventilation with such equipment. Keep flames, sparks, pilot lights, electrical arcs, arc-producing equipment and all other sources of ignition well away. Keep a type ABC fire extinguisher handy.

In all fuel system installations, cleanliness is extremely important.

- Make every effort to prevent fuel contamination from:
 - Moisture
 - Dirt
 - Excess thread sealant

- Contaminants of any kind
- Clean all fuel system components before installing.

Gaseous-fuel supply system design, materials, components, fabrication, assembly, installation, testing, inspection, operation, and maintenance must comply with the applicable codes. See NFPA Standards No. 37, 54, and 58. For seismic installation, refer to the seismic label. Where seismic installation is required, there may be specific anchorage requirements for the generator set and other installed components.

Most codes require a manual shutoff valve ahead of a flexible fuel hose. The manual valve should be of the indicating type. The generator set has electric (battery-powered) shutoff valves included.

NOTICE

It is recommended that a shutoff valve be located near the generator set for emergency shut off or servicing the generator set. Follow applicable codes.

Until the generator set is connected, cap the fuel line stub-up at the generator set to prevent dirt from entering and gas from discharging if the gas supply shutoff valve is opened accidentally.

To determine the required capacity, add generator set consumption to the gas consumed for heating, cooking, clothes drying, etc. A typical natural gas installation might require a 400,000 BTU meter. Consideration should also be given to utilizing high pressure gas supply if available. This reduces the required size and cost of gas piping, especially if the location of the generator set requires a long supply line.

Natural Gas Fuel System

Requirements for a natural gas generator set are as follows:

- Adequate fuel supply to operate correctly and run at full load
- Pipeline quality gas
- The length of the fuel supply pipe from the gas service entrance to the generator set must be known to determine the correct fuel pipe size (refer to the **Fuel Line Selection** charts)

NOTICE

Iron pipe must be a minimum of schedule 40 subject to the authority having jurisdiction.

- Cummins flexible fuel line to protect the fuel system from vibration, expansion, and contraction
- Manual shutoff valve

\Lambda WARNING

Fuel leaks can lead to explosive accumulations of gas. Prevent gas leaks and the accumulation of gaseous fuel in the event of a leak.

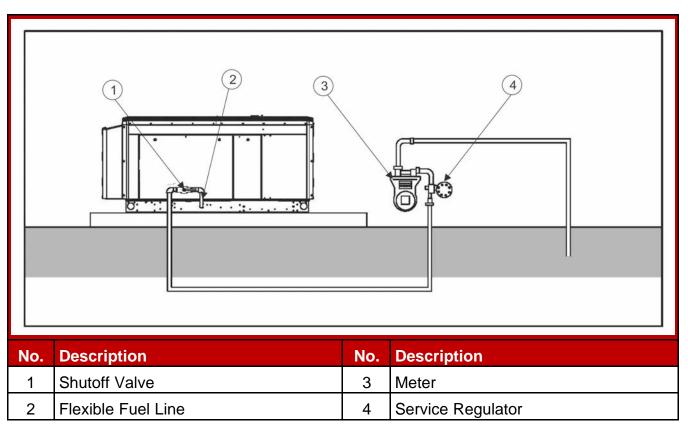

FIGURE 4. TYPICAL NATURAL GAS INSTALLATION

Natural Gas Supply Line Size

The natural gas supply meter may need to be exchanged for a higher capacity meter to supply the additional gas consumed by the generator set.

Use the total load requirement of the generator set to determine the size of the fuel supply pipe. Use the tables and charts in the <u>Fuel Line Selection</u> appendix to determine the correct pipe size.

An older site might require upgrading and repair of the gas supply system. Schedule an upgrade or repair to minimize power and gas supply interruptions.

Make sure the full load fuel supply pressure at the inlet to the generator fuel shutoff valves is set at 6 - 12 inch water column (1.5 - 3.0 kPa) for all operating loads (no load to full load). (The maximum pressure under any condition is 13 inch water column [3.2 kPa].) Refer to the Model Specifications section.

3-2016

Propane Fuel System

Propane vapor can be used as a primary fuel source or as a backup fuel source for the generator sets with two independent fuel sources connected to the generator set.

⚠ WARNING

Fuel leaks can lead to explosive accumulations of gas. Propane sinks in air and can accumulate inside housings, basements, and other below-grade spaces. Prevent gas leaks and the accumulation of gaseous fuel in the event of a leak.

NOTICE

NFPA Standard No. 58 requires all persons handling and operating propane to be trained in proper handling and operating procedures.

The required components in a propane vapor fuel system are as follows:

| Component | Description |
|-------------------------------|--|
| Propane Tank | Make sure to identify and utilize the correct tank size based on fuel flow requirements and the lowest average temperature for your region. If the tank is sized incorrectly, the generator set could run out of fuel. Refer to the Minimum LPG Tank Size figure in the <u>Fuel Line Selection</u> appendix. |
| Shutoff Valve | Useful during installation or in the event of a leak (may be required to meet local codes). |
| Primary Regulator | Located at the tank outlet, the primary regulator reduces the tank pressure to the working pressure in the fuel supply line. Primary and secondary regulators must be properly matched for a safe and functional system. Consult with your propane supplier to ensure that the regulators are properly sized. |
| Secondary Regulator | Located near the generator set, the secondary regulator reduces the higher line pressure to a working pressure of 6 - 12 inch water column (1.5 - 3.0 kPa). Higher pressure before the secondary regulator is necessary to ensure that there is enough fuel available at the secondary regulator for a fully loaded generator set. |
| Fuel Line | Connects to the fuel supply. It must be sized properly using the propane fuel line sizing charts (see the Fuel Line Selection appendix). Installation must comply with all national, state, and local codes. |
| Cummins Flexible Fuel Line | Protects the fuel system from vibration, expansion, and contraction. |

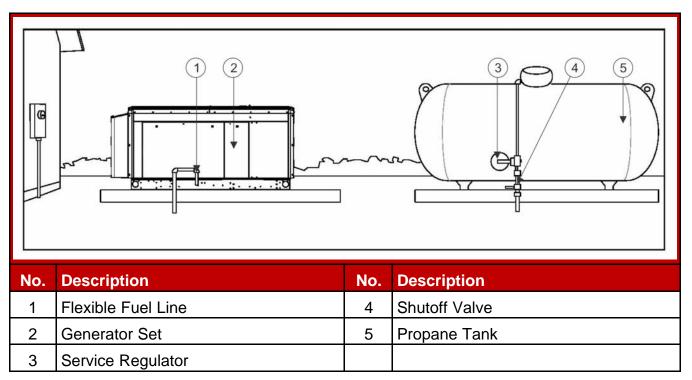

FIGURE 5. TYPICAL PROPANE INSTALLATION

Propane Fuel

▲ WARNING

Propane presents the hazard of fire or explosion that can cause severe personal injury or death. Do not permit any flame, spark, arc-producing equipment, switch, pilot light, cigarette, or other ignition source near the fuel system. Keep an ABC type fire extinguisher nearby.

⚠ WARNING

Fuel leaks can lead to explosive accumulations of gas. Propane sinks in air and can accumulate inside housings, basements and other below-grade spaces. Prevent gas leaks and the accumulation of gaseous fuel in the event of a leak.

Use clean, fresh HD-5 grade propane or equivalent product consisting of at least 90% propane.

NOTICE

NFPA Standard No. 58 requires all persons handling and operating propane to be trained in proper handling and operating procedures.

NOTICE

Commercial propane may contain more than 2.5% butane, which can result in poor fuel vaporization and low tank pressure, resulting in poor engine starting and operation in below 32 °F (O °C) temperatures.

Propane Tank Size

When propane is used, size the tank correctly to ensure successful generator set operation.

Considerations when figuring the proper propane tank size:

- Temperature is a critical factor that affects the size of the tank.
 - Ambient temperatures can affect how quickly liquid is converted to gas.
 - Generator set fuel consumption is the same regardless of the surrounding temperatures.
 - Colder weather climates require larger fuel tanks. Larger tanks have greater surface area, allowing more liquid propane to vaporize and maintain the required fuel rate.
 - Propane is stored as liquid. Keep the fuel tank at least 50% full to operate properly. Fuel tanks that are less than 50% full may not have the capacity to vaporize enough propane to operate the generator set and other LP appliances.
- Propane tanks are sized by their internal volume in gallons, not the amount of fuel they can hold (which is less).
- Propane tanks are generally filled to only 80% of their capacity. Therefore, a 500-gallon (1892-liter)tank results in 400-gallon (1514-liter) tank capacity.
- Low ambient temperatures affect the amount of fuel available from the propane tank.
- Approximately 60% of the fuel (in gallons) filled in the tank can be effectively used. Therefore, a 500-gallon (1892-liter) tank results in 240-gallon (908-liter) usable capacity.

To assist in the proper installation of the propane tank, follow the guidelines below.

- Consult your tank and propane supplier for assistance in all aspects of determining tank size, selection of components and installation requirements.
- Fit the propane tanks with a pressure reducing regulator before connection to the generator set to prevent fuel system damage.
- Locate the propane tanks and all other fuel system components at least 10 feet (3 meters) from any source of combustion (including the generator set). The fuel supplier or local code may require a larger distance between the tank and source of combustion.

• Install the propane tanks according to all national and local codes and standards, and as required by the fuel tank and fuel supplier.

Refer to the **Fuel Line Selection** appendix for propane figures and tables.

Sizing Fuel Lines

Incorrect fuel line size may cause the generator set to not run or provide full power output. Fuel line sizes for installations typically range from 1/4 to 2 or more inches in diameter.

To determine the optimal fuel line size, the following information is needed:

| Category | Description |
|--|---|
| Fuel Flow Requirements for the Generator Set | Fuel flow requirements have a large impact on fuel line size. |
| Fuel Source (Natural Gas or Propane Vapor) | Fuel sources can affect fuel line size. Natural gas installations generally require a higher fuel flow rate compared to propane vapor installations, since propane has a higher energy content. |
| Fuel Line Length (Including Fittings) | Factor in the equivalent lengths of all of the fittings (elbows, tees, valves) in the installation in addition to the fuel line length. Longer lengths require larger diameters. |
| Fuel Line Type (e.g., Copper Tubing or Iron Pipe) | Most fuel line types are iron pipe or copper tubing. Be sure to use the sizing chart for the fuel line type when sizing the fuel line. |

There are some basic but very important steps all installers must follow to make sure that fuel lines are sized correctly:

- 1. Verify adequate fuel flow, quality, and pressure available from utility connection.
- 2. Determine fuel requirements at full load. See the Model Specifications section to determine the fuel flow requirements.
- Determine equivalent length of fuel line fittings required. See the NFPA Pipe Fittings table in the <u>Fuel Line Selection</u> appendix to determine the equivalent lengths for elbows, tees, and valves. Add this length to fuel line length to determine total equivalent length.
- 4. Determine required fuel line size at full load. See the **Fuel Line Selection** appendix to determine the fuel line size.

To calculate the minimum pipe size:

- 1. Make a list of all the fittings and valves in a proposed system and add their equivalent lengths.
- 2. Add all lengths of straight pipe to arrive at a total equivalent length to the fittings/valves total.
- 3. Choose the applicable table based on the fuel system and fuel line material.

- 4. Obtain the maximum fuel requirements for the specific generator set from the Model Specifications section.
- 5. Refer to the fuel line sizing charts in the <u>Fuel Line Selection</u> appendix. Locate the equivalent length of pipe (or next larger equivalent length) in the left hand column. Move across the row to where the maximum capacity number is as large or larger than the maximum fuel consumption (or next larger). At the top of that column is the minimum nominal pipe size or tubing size required for the system as designed.

Installing Fuel Lines

The basic components required for fuel line installation are as follows:

- Flexible connection
- Fuel line
- Shutoff valve
- Fuel supply

To install the fuel lines:

- 1. Connect a flexible fuel line to the fuel connection ports on the generator set.
- 2. Connect the opposite end of the flexible fuel line to the fuel source line near the shutoff valve.

NOTICE

A shutoff valve is recommended and often required by local and state codes.

Testing the Fuel System for Leaks

After assembly and before initial operation, all of the fuel system components must be tested and proven free of any leaks.

\land WARNING

Fuel presents the hazard of explosion or fire which can result in severe personal injury or death. Do not use an open flame to check for leaks. Do not smoke or allow any flame, spark, pilot light, arc-producing equipment, switch or other ignition sources around fuel or fuel components. Keep multi-class ABC fire extinguishers handy.

NOTICE

Follow any local codes and standards, as they may require a different method or documentation of a leak test.

After assembly, and before initial operation, all fuel system connections, hose, valves, regulators and fittings must be tested and proven free of leaks using a soapand-water (or equivalent) solution while the system is under gas or air pressure of at least 1.5 times the supply pressure or 3 psi (20.7 kPa) minimum.

- 1. [Copied from GSBB Manual] *Energize the fuel solenoid from a separate 12 VDC source before testing the fuel system.*
- 2. Pressurize the system to a minimum of one and a half times the required fuel supply pressure.
- 3. Spray the soap-and-water solution on all of the joints.
- 4. Inspect all of the joints and monitor the line pressure. If bubbles appear, there is a leak.
- 5. If a leak is found, tighten the joints, recheck for leaks, and repair or replace component(s) as needed.

4.3 Engine Exhaust

The exhaust system for this generator set is complete and was designed specifically for this generator set. Do not modify or add to the exhaust system of this generator set.

▲ WARNING

Exhaust gas is deadly. Make sure that the exhaust system terminates away from building vents, windows, doors, and sheltered spaces that may not have ample fresh air ventilation.

Engine discharge air and exhaust carry carbon monoxide gas (odorless and invisible) which can cause asphyxiation and death. Never use engine discharge air or exhaust for heating a room or enclosed space.

4.4 Electrical Connections

⚠ WARNING

Improper installation can lead to electrocution and damage to property. Electrical connections must be made by a licensed electrician.

3-2016

⚠ WARNING

Automatic startup of the generator set during installation can cause severe personal injury or death. Make sure the generator set is shut down and disabled:

- 1. Press the generator set's "O" (Off) button to stop the generator set. Allow the generator set to thoroughly cool to the touch.
- 2. Turn off and disconnect the battery charger from the AC source before disconnecting the battery cables.
- 3. Disconnect the negative (–) cable from the battery and secure it from contacting the battery terminals to prevent accidental starting.

NOTICE

Refer to regional codes and the National Electrical Code (NFPA 70) for all electrical installation requirements.

NOTICE

Class 1 wiring methods must be used for connecting the generator set.

AC Connections

NOTICE

If a 100% rated breaker is used, 90 °C wire must be used for L1, L2, and L3 with the wire size determined by the 75 °C ampacity tables. Aluminum wire is not allowed with 100% rated breakers.

NOTICE

When using a circuit breaker with an adjustable, electronic trip unit, the amperage and trip curve settings may need adjustment to match the generator set load wiring, or downstream loads and circuit breakers. An accessory seal kit (part number A026M166) is available to tamper-proof the adjustable settings.

For grounding and neutral connections, look for the following symbols on the generator set circuit breaker cabinets.

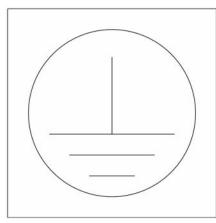

FIGURE 6. EQUIPMENT GROUNDING CONDUCTOR SYMBOL

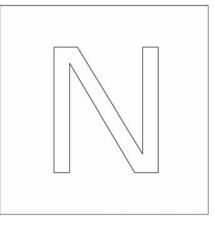

FIGURE 7. EQUIPMENT NEUTRAL CONNECTION SYMBOL

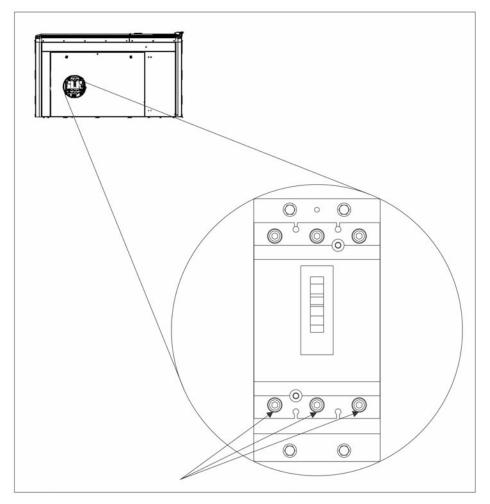

FIGURE 8. CIRCUIT BREAKER AC LOAD CONNECTION LOCATIONS

For connection to the generator set, AC load connections are made in the circuit breaker box. To access:

- 1. Open the enclosure side door to gain access to main circuit breaker box.
- 2. Place all circuit breaker handle in the OFF position.
- 3. Remove the eight bolts holding the circuit breaker cover.
- 4. Install the conductors to the circuit breaker load-side terminals, neutral lug, and equipment grounding lug.
- 5. Torque the circuit breaker terminals per specifications on the circuit breaker label.
- 6. Torque the neutral lug on the H & J-frame circuit breakers to 120 in-lb (14 Nm).
- 7. Torque the neutral lug on the L-frame circuit breakers to 442 in-lb (50 Nm).
- 8. Torque the equipment grounding lug to 120 in-lb (14 Nm).
- 9. Fill in the stub-up openings with an approved duct seal or mastic tape to keep out insects and rodents.
- 10. Install the circuit breaker cover.

11. Turn all circuit breakers on.

Automatic Transfer Switch AC Connections

Failure to use an approved transfer switch can lead to the electrocution of personnel working on the utility lines, damage to equipment, fire, or personal injury. An approved switching device must be used to prevent interconnection to the public utility.

Install the transfer switch in accordance with the RA Series Transfer Switch Owner Manual.

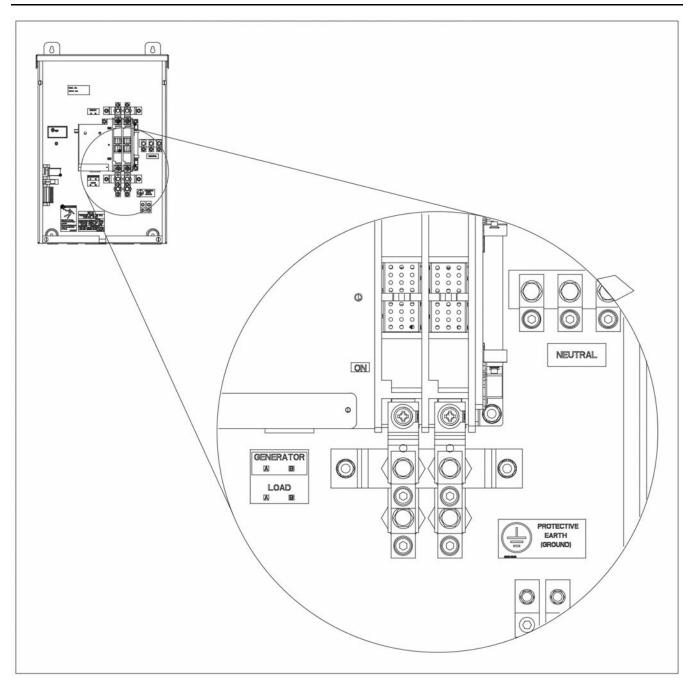

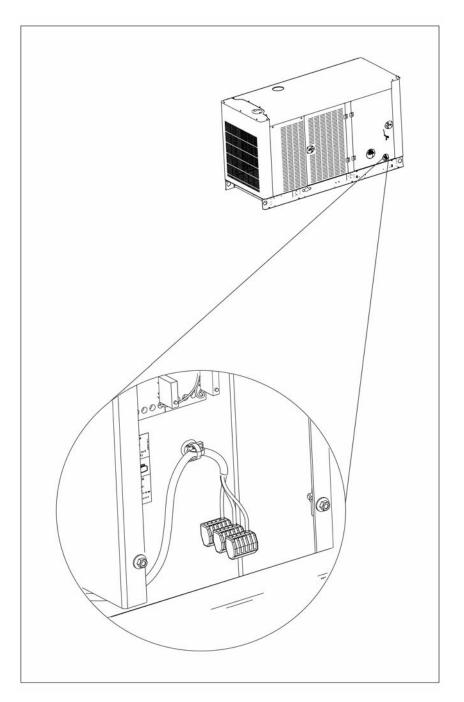

FIGURE 9. RA SERIES TRANSFER SWITCH AC CONNECTIONS LOCATION

Factory Option and Accessory Connections

The AC-powered options or accessories available include the battery charger, engine coolant heater, alternator heater, oil heater, battery warmer, and CCV heater (included with coolant heater).

NOTICE

The CCV heater requires power from a 120 VAC, 20 Amp protected circuit from the Main Distribution Panel. The CCV needs to be powered even during utility outages. Use 12 AWG 167 °F (75 °C) conductors to connect to the generator set AC distribution connector.

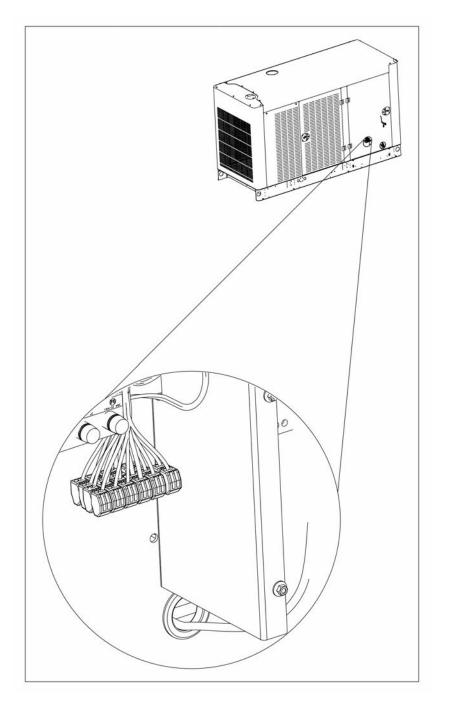

DC Connections

NOTICE

When selecting and installing conduit to the generator set, account for any needed accessories, such as a remote display, etc.

Automatic Transfer Switch DC Connections

Failure to use an approved transfer switch can lead to the electrocution of personnel working on the utility lines, damage to equipment, fire, or personal injury. An approved switching device must be used to prevent interconnection to the public utility.

Install the transfer switch in accordance with the RA Series Transfer Switch Owner Manual. The following image shows the location of the Cummins RA Series Transfer Switch customer connections.

NOTICE

Class 1 wiring methods should be used for connecting the generator set and transfer switch signal wiring.

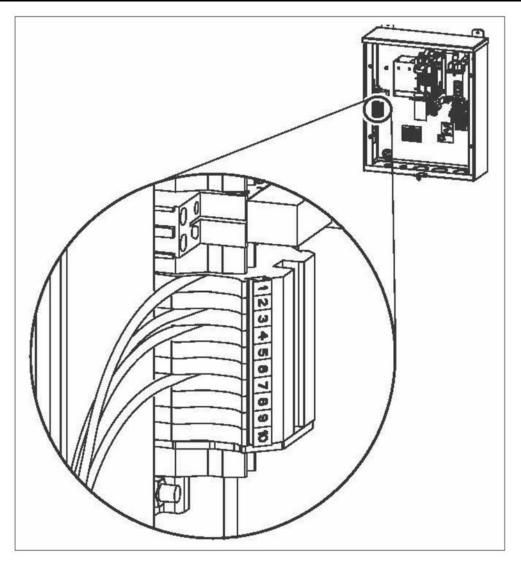

FIGURE 12. RA SERIES TRANSFER SWITCH DC CONNECTIONS LOCATION

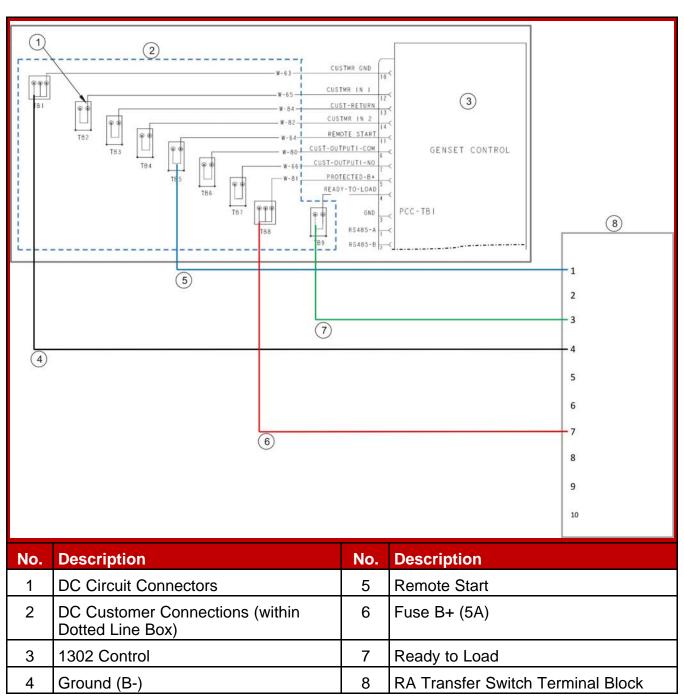

FIGURE 13. GENERATOR SET TO RA TRANSFER SWITCH DC CUSTOMER CONNECTIONS

Grounding

NOTICE

The generator set is shipped from the factory with the neutral and equipment ground not bonded together.

Refer to local codes and standards for grounding procedures.

Battery

The generator set requires a 12V battery (negatively grounded) for engine cranking and powering the electronic control system. When the generator set is running, the battery is charged from the engine-driven battery alternator. When the set is not running, an AC powered battery charger is needed to keep the battery charged.

As part of the installation, make sure that the battery is secured to the battery tray with the strap provided.

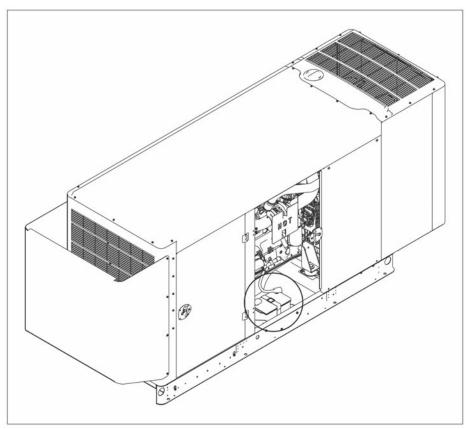

FIGURE 14. BATTERY LOCATION

▲ CAUTION

Ensure that the AC power to the battery charger is disconnected when installing the battery.

Wear proper safety protection when working around batteries. Keep open flames and sparks away from the equipment.

▲ CAUTION

Only personnel knowlegeable of batteries and required precautions should perform or supervise battery servicing.

To connect the battery:

- 1. Connect the positive battery terminal.
- 2. Connect the negative battery terminal.
- 3. Make sure that the black and red battery cable boots are in place.

Refer to the Model Specifications section for battery specifications.

An optional thermostatically controlled battery heater is available for more reliable starting in ambient temperatures below 0 °F (-18 °C).

To prevent injury due to accidental startup, do not connect the battery cables to the battery until the installation has been completed; tools, rags, and body parts are away from any rotating parts or electrically live parts; and it is time to start the set.

This page is intentionally blank.

5.1 Exercise Settings

NOTICE

When battery power is lost, these settings must be reset.

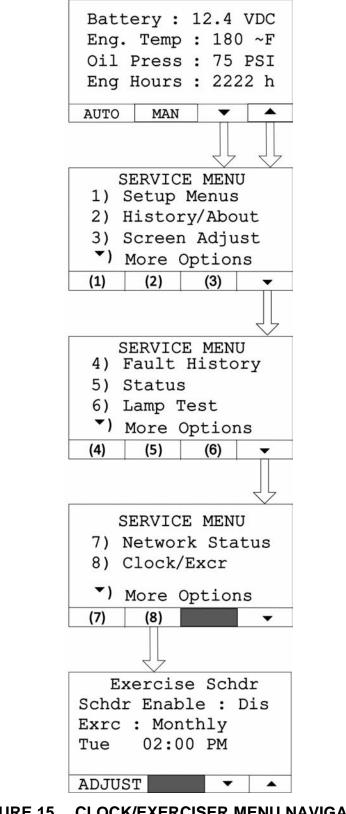

NOTICE Not applicable without a single phase RA series transfer switch.

To access the Clock/Exerciser Menu:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Navigate through the screens to find and select **Clock/Excr** in the Service Menu.

NOTICE

The following screens represent the standard operator panel (that is, HMI211). If using an in-home operator panel, which may be additionally purchased as an option, the screens may look slightly different. This procedure applies to both operator panels.

Updating Exercise Frequency

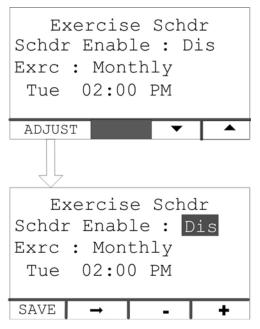

NOTICE

Not applicable without a single phase RA series transfer switch.

To update the exercise frequency and dates on the Clock/Exerciser Menu:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Access the Time Setup screen by selecting **Clock Exerciser** on the Genset Service Menu.
- 3. Press the down key on the Time Setup screen to access the Daylight Saving Adjust screen.
- 4. Select Adjust.
- 5. Press the down key on the Daylight Saving Adjust Start screen.
- 6. Select Adjust.
- 7. Press Exercise Schdr on the Daylight Saving Adjust End screen.
- 8. Press Adjust.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Use the + or keys to edit the following settings:
 - Schdr Enable: Enable or Disable
 - Exercise Schedule: Semi-Annual (every six months), Quarterly, Monthly, Bi-Monthly (the first and third week of every month based on the time set when the Bi-Monthly option is selected), or Weekly
 - Exercise Schedule: Day, Hours, Minutes, AM/PM
- Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

Updating Exercise Duration

To update the exercise duration on the Clock/Exerciser Menu:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Access the Time Setup screen by selecting **Clock Exerciser** on the Genset Service Menu.
- 3. Press the down key on the Time Setup screen to access the Daylight Saving Adjust screen.
- 4. Select Adjust.
- 5. Press the down key on the Daylight Saving Adjust Start screen.
- 6. Select Adjust.
- 7. Press **Exercise Schdr** on the Daylight Saving Adjust End screen.
- 8. Press the down key on the Exercise Schdr Menu.
- 9. Press Adjust.

- The horizontal right arrow key is used to select the duration block for editing exercise duration.
- Use the + or keys to edit the exercise duration minutes.

• Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

FIGURE 17. EXERCISE DURATION NAVIGATION

5.2 Time Setup

NOTICE

When battery power is lost, these settings must be reset.

NOTICE

Not applicable without a single phase RA series transfer switch.

To set up the generator set clock for the current date and time:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Access the Time Setup screen by selecting **Clock Exerciser** on the Genset Service Menu.
- 3. Select Adjust.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Select the left arrow to return to the previous screen.
- Adjust values by using the + or keys on the Adjust Menu of the Time Setup screen.

• Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

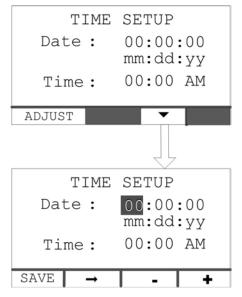

FIGURE 18. TIME SETUP SCREEN

Updating Daylight Saving Adjust Screen

To update the Time and Adjustment on the Daylight Saving Adjust screen:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Access the Time Setup screen by selecting **Clock Exerciser** on the Genset Service Menu.
- 3. Press the down key on the Time Setup screen to access the Daylight Saving Adjust screen.
- 4. Select Adjust.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Select the left arrow to return to the previous screen.
- Adjust values by using the + or keys on the Adjust screen of the Daylight Saving Adjust screen.
- Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

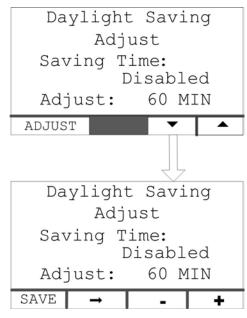

FIGURE 19. DAYLIGHT SAVING ADJUST SCREEN NAVIGATION

To access and update the Daylight Saving Adjust Start screen:

- 1. Press the down key on the Daylight Saving Adjust screen.
- 2. Press Adjust.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Use the + or keys to edit the following settings:
 - Month
 - Week
 - Day
 - Hour
- Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

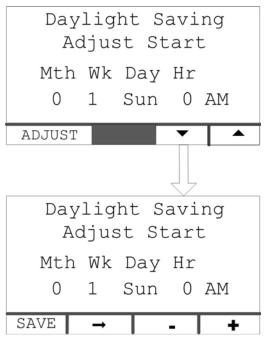

FIGURE 20. DAYLIGHT SAVING ADJUST START SCREEN

To access and update the Daylight Saving Adjust End screen:

- 1. Press the down key on the Daylight Saving Adjust Start screen.
- 2. Press Adjust.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Use the + or keys to edit the following settings:
 - Month
 - Week
 - Day
 - Hour
- Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

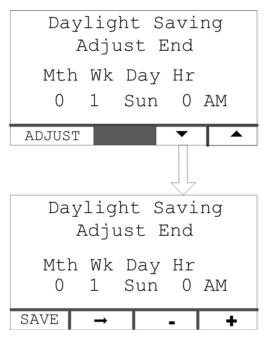

FIGURE 21. DAYLIGHT SAVING ADJUST END SCREEN

5.3 Brightness and Contrast

The Screen Adjust screen allows the contrast, brightness, and units to be set. To access the Screen Adjust screen:

1. From any Information screen, hold down the up and down arrows simultaneously for two seconds to gain access to the Service Menu screen.

2. Select Screen Adjust.

To adjust the contrast, brightness, or units from the Screen Adjust screen:

- 1. From the Screen Adjust screen, select Adjust to access the screen variables.
- 2. Press the right arrow to move between the variables.
- 3. Adjust settings, and press **Save** to save any changes.

- The horizontal right arrow key is used to select successive blocks for editing settings on the screen.
- Select the left arrow to return to the previous screen.
- Adjust values by using the + or keys on the Adjust screen of the Display Setup screen.
- Press **Save** to save any changes. After saving, the Save button changes to the Adjust button.

The following screens represent the standard operator panel (HMI211). If using an in-home operator panel, which may be additionally purchased as an option, the screens may look slightly different. This procedure applies to both operator panels.

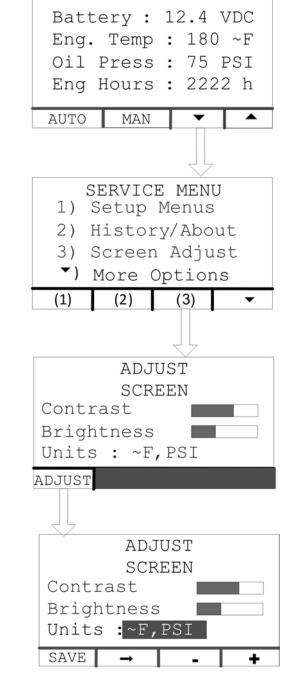

FIGURE 22. BRIGHTNESS AND CONTRAST SCREEN NAVIGATION

NOTICE

Adjusting the brightness on the operator panel adjusts the brightness of both the LCD backlight and the LEDs on the display. The contrast should never be 0 or 100% on any of the screens. The default value for Brightness is 50%.

5.4 History and About Menu

To access the History/About screen:

- 1. From any Information Menu, hold down the up and down arrows simultaneously for two seconds. The Service Menu appears.
- 2. Select History/About.
- 3. Advance through the screens to view information about the generator set, control, and display.

NOTICE

The following screens represent the standard operator panel (HMI211). If using an in-home operator panel, which may be additionally purchased as an option, the screens may look slightly different. This procedure applies to both operator panels.

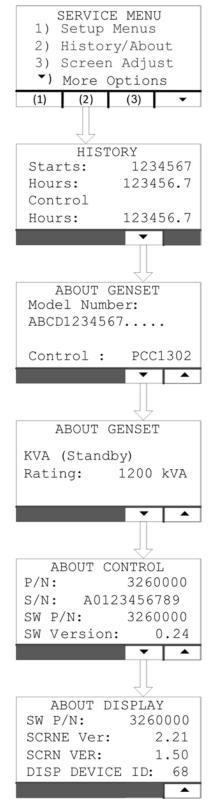

FIGURE 23. HISTORY/ABOUT MENU

5.5 Installation Checklist

| Tick | Item | | | | | | | |
|------|--|--|--|--|--|--|--|--|
| | General | | | | | | | |
| | Generator set wattage capacity is sufficient to handle maximum anticipated load. | | | | | | | |
| | At least 5 feet of clearance to combustible materials is provided. At least 3 feet of clearance is provided around the entire generator set for service and ventilation. | | | | | | | |
| | The generator set is located in an area not subject to flooding. | | | | | | | |
| | All installers have read and are familiar with the Generator Set Installation manual and the Health and Safety manual. | | | | | | | |
| | All installers have been thoroughly briefed on preventive maintenance procedures. | | | | | | | |
| | All installers have read and understand all important safety instructions. | | | | | | | |
| | Generator Set Support | | | | | | | |
| | The floor, roof or earth on which the generator set rests is strong enough and will not allow shifting or movement. Local codes for soil bearing capacity were followed. | | | | | | | |
| | The generator set is properly supported and secured to an approved base. | | | | | | | |
| | The supporting base is of non-combustible material and extends 6 inches all around the generator set. | | | | | | | |
| | Natural Gas and LP Vapor Fuel System | | | | | | | |
| | Fuel line size has been verified for generator set fuel consumption and pressure. | | | | | | | |
| | Approved flexible fuel line is installed between main fuel supply and the generator set's fuel system near the generator set | | | | | | | |
| | Fuel lines are properly installed, supported and protected against damage. | | | | | | | |
| | Fuel supply shutoff valves are installed to turn off fuel flow in case of leaks. | | | | | | | |
| | No leaks are found in fuel supply line as a result of leak testing fuel systems. | | | | | | | |
| | The inside of all fuel supply lines is free of contaminants. | | | | | | | |
| | Fuel pressure is at 6 - 12 inch water column (1.5 - 3.0 kPa). Maximum pressure under any condition: 13 inch water column (3.2 kPa). | | | | | | | |
| | Fuel pressure maintains at least 6 inches water column (1.5 kPa) when the generator set is at rated load. | | | | | | | |
| | The installation is compliant with all state and local codes and regulations. | | | | | | | |
| | AC and DC Wiring | | | | | | | |
| | The control is configured for the proper fuel type. | | | | | | | |
| | Wire sizes, wire types, insulation, conduits and connection methods all meet applicable codes. | | | | | | | |

| Tick | Item |
|------|---|
| | AC and DC wires are separated in their own conduit to prevent electrical induction. |
| | All load, line and generator connections are well made and correct. |
| | Generator Set Pre-Start |
| | A safety check was performed just before starting. |
| | The generator set engine is properly serviced with oil and coolant. |
| | The battery is properly installed, serviced and charged. |
| | The battery charger and engine coolant heater are connected and operational, if applicable. |
| | All generator set covers and safety shields are installed correctly. |
| | The fuel supply is turned on. |
| | All fuel shutoff valves are operational. |
| | The date and time have been set in the generator set control. |
| | The generator set operating mode has been selected. |

5.6 Startup

⚠ WARNING

Automatic startup of the generator set during installation can cause severe personal injury or death. Push the control switch OFF and disconnect the negative (–) cable from the battery to keep the generator set from starting.

After verifying that the installation was completed correctly, start and test the system. Make sure to connect the battery cables to the battery with the positive (+) cable first.

The following information applies to C70 N6, C80 N6, and C100 N6 models only: Adaptive learn is an engine ECM function that allows the generator set to "learn" its environment. There are small differences in the performance of each engine and fuel system component, so the ECM uses inputs from the engine sensors to adjust running conditions to operate more consistently for each individual generator set. After installation is complete and while testing the overall system function, the generator set must be run with no active faults under load (that is, transfer switch connected to maximum customer load available) until the engine temperature reaches 175 °F (80 °C) to allow the adaptive learn function to initialize.

Read through the Operator Manual and perform the maintenance and pre-start checks as instructed. The generator set is shipped from the factory with the proper level of engine oil and coolant, but should be checked before it is started. Start and operate the generator set following all the instructions and precautions in the Operator Manual. Ensure that the bonding bolts are installed into the service panels before leaving the site.

NOTICE

Before leaving the site, if the generator set is ready to be placed in service, set the control switch to the AUTO position to provide automatic standby power.

NOTICE

Contact your local Cummins service representative if you encounter a fault code.

5.7 InPower Service Tool

The InPower[™] service tool can be used in troubleshooting to perform tests, verify control inputs and outputs, and test protective functions. Refer to the InPower User's Guide, provided with the InPower software for test procedures.

5.8 Disabling the AMF Feature

NOTICE

This procedure must be performed by a qualified technician.

On single-phase units, the control is shipped with the Automatic Mains Failure (AMF) feature enabled. This feature has logic to control the RA Automatic Transfer Switch (ATS), including a 5-minute retransfer to utility delay. If you are not using an RA ATS, you can eliminate the 5-minute retransfer to utility delay by disabling the AMF feature using the instructions below.

NOTICE

This procedure is optional. If you do not disable the AMF feature, the generator set will just run for an additional 5 minutes after the utility has been restored.

NOTICE

These steps cannot be performed with the HMI211; they can only be performed with the InPower service tool.

- 1. Connect to the PCC1302 via InPower.
- 2. Navigate to the Adjustments->Features->Automatic Transfer Switch folder.
- 3. Select the Auto Mains Failure Enable parameter.
- 4. Double-click on Enabled in the Value field.
- 5. A pop-up will appear with available choices. Select Disabled.
- 6. Select Device->Save Adjustments from the top menu bar.

- 7. A pop-up will appear asking if the change is to be saved. Click the Save button.
- 8. After a pop-up appears confirming that the change has been saved, disconnect InPower from the PCC1302.

Appendix A. Fuel Line Selection

A.0 Fuel System Pipe Sizing Introduction

Incorrect fuel line size may cause the generator set to not run or provide full power output.

Tables are included in this section to help calculate pipe sizing for natural gas and propane vapor withdrawal under specified conditions. Consult NFPA 54 or other applicable codes for other operating conditions or other fuel system installation requirements.

Refer to the *Engineering Application Manual T-030: Liquid Cooled Generator Sets* manual (A040S369) for more information.

To determine the optimal fuel line size, the following information is needed:

| Category | Description |
|--|--|
| Fuel Flow Requirements for the Generator Set | Fuel flow requirements have a large impact on fuel line size. |
| Fuel Source (Natural Gas or Propane Vapor) | Fuel sources can affect fuel line size. Natural gas installations generally require a higher fuel flow rate compared to propane vapor installations, since propane has a higher energy content. |
| Fuel Line Length (Including Fittings) | As fuel line lengths increase, they may require larger diameter fuel lines. Be sure to consider the equivalent length of all of the fittings (elbows, tees, valves) in the installation in addition to the straight pipe length. |
| Fuel Line Type (e.g., Copper Tubing or Iron Pipe) | Most fuel line types are iron pipe or copper tubing. Be sure to use the sizing chart for the fuel line type when sizing the fuel line. |

NOTICE

NFPA 54 has selection tables for other approved fuel lines. Verify with the authorities having jurisdiction the allowed fuel line type for the generator set installation.

3-2016

A.1 Gas Pipe Sizing

NOTICE

The following tables in this section are reprinted with permission from NFPA 54-2015, *National Fuel Gas Code*, Copyright © 2014, National Fire Protection Association.

- Natural Gas Schedule 40 Metallic Pipe Sizing
- Natural Gas Semirigid Copper Tubing Sizing
- Propane Vapor Schedule 40 Iron Pipe Sizing
- Propane Vapor Semirigid Copper Tubing Sizing
- Propane Schedule 40 Iron Pipe Sizing, Liquid Withdrawal (Maximum Capacity of Pipe in Cubic Feet of Gas per Hour)

This reprinted material is not the complete and official position of the NFPA on the referenced subject, which is represented only by the standard in its entirety.

Sizing of gas piping for proper fuel delivery, both flow and pressure, can become quite complex. A simplified method is to convert all fittings, valves, etc. to equivalent lengths of pipe in the diameter(s) being considered. The total equivalent length can then be related to flow capacity. Equivalent lengths of pipe fittings and valves can be found in the table below.

| | NOMINAL INCH (MILLIMETER) PIPE SIZE | | | | | | | | | | |
|---|-------------------------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--|--|
| TYPE OF | 1/2 | 3/4 | 1 | 1-1/4 | 1-1/2 | 2 | 2-1/2 | 3 | 4 | | |
| FITTING | (15) | (20) | (25) | (32) | (40) | (50) | (65) | (80) | (100) | | |
| 90° Std. Elbow or | 1.6 | 2.0 | 2.6 | 3.3 | 4.0 | 5.0 | 6.0 | 7.5 | 10.0 | | |
| Tee Reduced ½. | (0.5) | (0.6) | (0.8) | (1.0) | (1.2) | (1.5) | (1.8) | (2.3) | (3.1) | | |
| 90° Long Radius Elbow or Straight Run Tee | 1.0 (0.3) | 1.4 (0.4) | 1.7 (0.5) | 2.3 (0.7) | 2.6 (0.8) | 3.3 (1.0) | 4.1 (1.3) | 5.0 (1.5) | 6.7 (2.0) | | |
| 45° Elbow | 0.8 | 0.9 | 1.3 | 1.7 | 2.1 | 2.6 | 3.2 | 4.0 | 5.2 | | |
| | (0.2) | (0.3) | (0.4) | (0.5) | (0.6) | (0.8) | (1.0) | (1.2) | (1.6) | | |
| 180° Std. Bend | 2.5 | 3.2 | 4.1 | 5.6 | 6.3 | 8.2 | 10.0 | 12.0 | 17.0 | | |
| | (0.8) | (1.0) | (1.2) | (1.7) | (1.9) | (2.5) | (3.1) | (3.7) | (5.2) | | |
| TEE, Side Inlet or | 3.0 | 4.0 | 5.0 | 7.0 | 8.0 | 10.0 | 12.0 | 15.0 | 21.0 | | |
| Outlet | (0.9) | (1.2) | (1.5) | (2.1) | (2.4) | (3.0) | (3.7) | (4.6) | (6.4) | | |

TABLE 15. EQUIVALENT LENGTHS OF PIPE FITTINGS AND VALVES IN FEET
(METERS)

| | | | - | | | | 1 | | 1 |
|-------------------------------------|--------------|--------------|---------------|---------------|---------------|---------------|---------------|---------------|----------------|
| Foot Valve and | 3.7 | 4.9 | 7.5 | 8.9 | 11.0 | 15.0 | 18.0 | 22.0 | 29.0 |

| Swing Check Valve, Fully Open | 6.0 (1.8) | 8.0 (2.4) | 10.0 (3.0) | 14.0 (4.3) | 16.0 (4.9) | 20.0 (6.1) | 25.0 (7.6) | 30.0 (9.1) | 40.0 (12.2) |
| Globe Valve, | 18.0 | 22.0 | 29.0 | 38.0 | 43.0 | 55.0 | 69.0 | 84.0 | 120.0 |
| Fully Open | (5.5) | (6.7) | (8.8) | (11.6) | (13.1) | (16.8) | (21.0) | (25.6) | (36.6) |
| Angle Valve, Fully | 7.0 | 9.0 | 12.0 | 15.0 | 18.0 | 24.0 | 29.0 | 35.0 | 47.0 |
| Open | (2.1) | (2.7) | (3.7) | (4.6) | (5.5) | (7.3) | (8.8) | (10.7) | (14.3) |
| Gate Valve, Fully | 0.7 | 0.9 | 1.0 | 1.5 | 1.8 | 2.3 | 2.8 | 3.2 | 4.5 |
| Open | (0.2) | (0.3) | (0.3) | (0.5) | (0.5) | (0.7) | (0.9) | (1.0) | (1.4) |

The remaining tables in this section show maximum gas capacity for equivalent lengths of various pipe sizes.

Here are some basic but very important steps that all installers must follow to make sure that fuel lines are sized correctly:

- 1. Verify adequate fuel flow, quality, and pressure available from the natural gas utility connection or the propane system.
- 2. Obtain the maximum fuel consumption requirements at full load for the specific generator set from the Model Specifications section and for all gas appliances attached to the pipe system.
- 3. Make a list of all the fittings and valves in the proposed system used in this generator set installation.
- 4. Determine the equivalent length of all fuel line fittings (elbows, tees, and valves). (See the NFPA Pipe Fittings table in this appendix to determine the equivalent lengths for all fuel line fittings.)
- 5. Add the equivalent length of the fuel line fittings to the lengths of straight pipe to determine the total equivalent length of the system.
- 6. Choose the applicable table in this appendix based on the fuel type (natural gas, propane vapor or liquid propane) and fuel line material.
- 7. Determine the fuel line size at full load:
 - a. Locate the equivalent length of pipe (or next larger equivalent length) in the left hand column.
 - b. Move across the row to where the maximum flow capacity number is as large or larger than the maximum fuel consumption.
 - c. Move to the top of that column to where the minimum nominal pipe size or tubing size required *for the system as designed* is shown.

TABLE 17. NATURAL GAS SCHEDULE 40 METALLIC PIPE SIZING

| Gas: | | | | Natural | | | | | | | | | | | |

NA: A flow of less than 10,000 BTU/hr.

Note: All table entries are rounded to 3 significant digits.

*Table capacities are based on Type K copper tubing inside diameter (shown), which has the smallest inside diameter of the copper tubing products.

TABLE 25.PROPANE SCHEDULE 40 IRON PIPE SIZING, LIQUID WITHDRAWAL
(MAXIMUM CAPACITY OF PIPE IN CUBIC FEET OF GAS PER HOUR)*

LEADS W6 (T12) AND U6 (T10) CROSS EACH OTHER TO CONNECT TO THE ADJACENT STUDS. W6 (T12) SHOULD BE ROUTED OVER U6 (T10) WITH THE SPACING BETWEEN THE LUGS OF AT LEAST IOMM.

LEADS GOING THROUGH CT3 ARE ONLY MEANT FOR ROUTING, NOT TO MEASURE CURRENT.

|---|------|--|--|--|
| | SE I | SMIC INSTALLATIONS NOTES: | | |
| | I, | THE DESIGN OF POST-INSTALLED ANCHORS IN CONCRETE USED FOR THE COMPONENT ANCHORAGE IS PRE-QUALIFIED FOR SEIS IN ACCORDANCE WITH "ACI 355.2-07" AND DOCUMENTED IN A REPORT BY A REPUTABLE TESTING AGENCY. (EX. THE EVALUATION SERVICE REPORT ISSUED BY THE INTERNATIONAL CODE COUNCIL) | MIC APPLICATIONS | |
| | 2. | ANCHORS MUST BE INSTALLED TO AN EMBEDMENT DEPTH AS RECOMMENDED IN THE PRE-QUALIFICATION TEST REPORT AS DEFIFOR "CBC 2013" APPLICATIONS. | NED IN NOTE I. | |
| | 3. | ANCHORS MUST BE INSTALLED IN MINIMUM 3000 PSI COMPRESSIVE STRENGTH NORMAL WEIGHT STRUCTURAL CONCRETE. CONCR "ASTM C33". | ETE AGGREGATE MUST COMPLY WITH | |
| | 4. | ANCHORS MUST BE INSTALLED TO THE TORQUE SPECIFICATION AS RECOMMENDED BY THE ANCHOR MANUFACTURER. | | |
| | 5. | ANCHORS MUST BE INSTALLED IN LOCATIONS SPECIFIED ON THIS INSTALLATION DRAWING. | | |
| | 6. | WASHERS MUST BE INSTALLED AT EACH ANCHOR LOCATION BETWEEN THE ANCHOR HEAD AND EQUIPMENT FOR TENSION LOAD DI WASHERS MUST BE TYPE A OR B PLAIN WASHERS MEETING ASME B18.21.1-2009. WASHER SIZE TO MATCH ANCHOR DIAMETER. | STRIBUTION. | |
| | 7. | CONCRETE FLOOR SLAB AND CONCRETE HOUSEKEEPING PADS MUST BE DESIGNED FOR SEISMIC APPLICATIONS IN ACCORDANCE | WITH "ACI 318-11". | |
| | 8. | ALL HOUSEKEEPING PAD THICKNESSES MUST BE DESIGNED IN ACCORDANCE WITH THE PRE-QUALIFICATION TEST REPORT AS D A MINIMUM OF 1.5X THE ANCHOR EMBEDMENT DEPTH, WHICHEVER IS LARGEST (UNLESS NOTED OTHERWISE). | EFINED IN NOTE I OR | |
| | 9. | ALL HOUSEKEEPING PADS MUST BE DOWELLED OR CAST INTO THE BUILDING STRUCTURAL FLOOR SLAB AND DESIGNED FOR SEI PER "ACI 318-11" AND AS APPROVED BY THE STRUCTURAL ENGINEER OF RECORD. | SMIC APPLICATION | |
| | 10. | FLOOR MOUNTED EQUIPMENT (WITH OR WITHOUT A HOUSEKEEPING PAD) MUST BE INSTALLED TO A STEEL REINFORCED STRUCT THAT IS SEISMICALLY DESIGNED AND APPROVED BY THE ENGINEER OF RECORD TO RESIST ALL LOADS FROM EQUIPMENT BEIN TO THE FLOOR. | | |
| | 11. | COORDINATE REINFORCEMENT OF SUPPORT STRUCTURE WITH EQUIPMENT ANCHOR LOCATIONS. | | |
| | 12. | ATTACHING SEISMIC CERTIFIED EQUIPMENT TO FLOOR OTHER THAN THOSE DESIGNED TO ACCEPT THE SEISMIC LOADS FROM C BY THE STRUCTURAL ENGINEER OF RECORD IS PROHIBITED. | ERTIFIED EQUIPMENT | |
| | 13. | INSTALLATION ONTO A STEEL ROOF STRUCTURE OR MANUFACTURED STEEL CURB SHALL BE COORDINATED WITH THE STRUCTURA | L ENGINEER OF RECORD. | |
| | Ι4. | CONNECTIONS TO THE EQUIPMENT, INCLUDING BUT NOT LIMITED TO CONDUIT, WIRING FROM CABLE TRAYS, OTHER ELECTRIC CONNECTIONS, ARE THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR AND BEYOND THE SCOPE OF THIS DOCUMENT. FLEXIBLE ATTACHMENTS MUST BE USED FOR SEISMIC CONNECTIONS TO ISOLATED COMPONENTS OR ISOLATED EQUIPMENT. THE FLEXIBLE ATTACHMENT MUST PROVIDE FOR ENOUGH RELATIVE DISPLACEMENT TO REMAIN CONNECTED TO THE EQUIPMENT DURING AND AFTER A SEISMIC EVENT. | | |
| | 15. | REFER TO GENSET OUTLINE DRAWINGS FOR WEIGHT, CG AND CONFIGURATION SPECIFICS. | | |
| | | | | |
