

## *...on your decision to purchase the QuietCool Winterized Insert*

We share your excitement as we know the advantages of using a Winterized Insert. The Winterized Insert will help decrease any cold air leaking from the attic into the home when the QuietCool whole house fan system is not in use. The Winterized Insert is made up of a Vacuum Insulated Panel which contains an R value of 40. The cover was checked visually, dimensionally and for density, passing our quality control test. Here is some additional information we would like to share with you when it comes to using your new QuietCool Winterized Insert.

### Installation:

---

- 1 When installing the Winterized Insert, you will need a flat head screw driver to remove the grille core from your ceiling.
- 2 Remove your grille by using a flat head screw driver in one of the creases in the corners of the grille core. Make sure to keep your other hand on the center of the grille core preventing it from falling. With a little prying pressure, the grille core will easily be removed from the ceiling. Then place your Winterized Insert into the back side of the grille core.
- 3 Lastly, install your grille core and Winterized Insert into the grille frame by snapping it into place. Congratulations, your Winterized Insert is installed and providing you with an R-40 insulation value.

#### Storage:

When you are not using your Winterized Insert be sure to place it back into the box that it came with. This will ensure the cover is not damaged while stored and will enhance the longevity of the Winterized Insert.

#### Handling:

The Winterized Insert is delicate and should be handled with care. Any cuts or punctures to the Winterized Insert will cause the vacuum insulated panel to lose its fantastic R value. Be careful when installing the cover and make sure it does not bump or scratch against anything that may cause the panel to lose its vacuum seal.
