## IMPORTANT INFORMATION

TO AVOID SERIOUS PERSONAL INJURY, ALL USERS AND EMPLOYERS/OWNERS MUST READ AND UNDERSTAND ALL INSTRUCTIONS IN THIS MANUAL BEFORE OPERATING OR MAINTAINING THIS TOOL.

Keep this manual for the safety warnings and precautions, operating, inspection, maintenance. Keep this manual and the receipt in a safe and dry place for future reference.

# EXPLANATION OF THE NAILING ACTION

SINGLE ACTUATION MECHANISM:

First, press the safety against the wood; next, pull the trigger to drive the fastener. After fastening once, fastening will not be possible again until the trigger is released and pressed again.

CONTACT ACTUATION MECHANISM:

First, press the safety against the wood; next, pull the trigger to drive the fastener. First. Pull the trigger; next, press the safety against the wood to drive the fastener. If the trigger is held back, a fastener will be driven each time when the safety is pressed against the wood.

FULL SEQUENTIAL ACTUATION MECHANISM:
 First, press the safety against the wood; next, pull the trigger to drive the fastener. Follow the same sequence to continue driving fasteners.

## **GENERAL SAFETY RULES**

#### **WORK AREA**

- KEEP THE WORK AREA CLEAN AND WELL LIGHTED.
   Cluttered benches and dark areas increase the risks of accidents
- DO NOT OPERATE THE TOOL IN EXPLOSIVE ATMOSPHERES, such as in the presence of flammable liquids, gases, or dust. The tool creates a spark which may ignite flammable liquids, gases or dust.
- KEEP VISITORS AWAY. Do not let visitors handle the tool. All visitors should be kept safety away from work area.
- NEVER ENGAGE IN HORSEPLAY WITH THE TOOL.
   Respect the tool as a working implement.

#### PERSONAL SAFETY

 OPERATORS AND OTHERS IN WORK AREA MUST WEAR SAFETY GLASSES WITH SIDE SHIELDS. When operating the tool, always wear safety glasses with side shields, and make sure others in work area wear safety glasses, too. Safety glasses must conform to the requirements of American National Standards Institute. ANSI Z87.1 and provide protection against flying particles both from the front and side.

The employer must enforce the use of safety glasses by the tool operator and others in work area.

- ALWAYS WEAR EAR AND HEAD PROTECTION. Always wear ear protection to protect your ears from loud noise, Always wear head protection to protect your head from flying objects.
- USE SAFETY EQUIPMENT. A dust mask, non-skid safety shoes and a hard hat must be used for the applicable conditions. Wear a full face shield if you are producing metal filings or wood chips.
- DRESS PROPERLY. Do not wear loose clothing or jewelry. Contain long hair. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewelry, or long hair can be caught in moving parts and increases the risk of injury.
- STAY ALERT, WATCH WHAT YOU ARE DOING AND USE COMMON SENSE WHEN OPERATING A POWER TOOL.
   Do not use tool while tired or under the influence of drugs, alcohol, or medication. A moment of inattention while operating the tool may cause serious injury.
- AVOID UNINTENTIONAL FIRING. Keep fingers away from trigger when not driving fasteners, especially when connecting the tool to the air supply.
- DO NOT OVERREACH. Keep proper footing and balance at all times. Proper footing and balance enables better control of the tool in unexpected situations.
- MAKE SURE AIR HOSE IS FREE OF SNAGS AND OBSTRUCTIONS. DO NOT ATTACH AN AIR HOSE OR TOOL TO YOUR BODY. Entangled or snarled hoses can cause a loss of balance or footing in addition to unintentional tool operation. Attach the hose to the structure to reduce the risk of loss of balance of the hose shifts.

#### TOOL USE AND CARE

- NEVER POINT TOOL AT YOURSELF OR OTHERS IN WORK AREA. Always assume the tool contains fasteners. Never point the tool at yourself or others, whether it contains fasteners or not. If fasteners are mistakenly driven, it can lead to severe injuries. Never engage in horseplay with the tool. Respect the tool as a working implement.
- KEEP FINGERS AWAY FROM TRIGGER WHEN NOT DRIVING FASTENERS TO AVOID ACCIDENTAL FIRING. Never carry the tool with finger on trigger since you could drive a fastener unintentionally and injure yourself or someone else. Always carry the tool by the handle only.
- NEVER MODIFY OR ALTER A TOOL. Doing so may cause it to malfunction and personal injuries may result.
- KNOW THIS TOOL. Read manual carefully, learn its applications and limitations, as well as the specific potential hazards related to this tool.
- USE ONLY FASTENERS THAT ARE RECOMMENDED.

- **FOR YOUR MODELS.** Do not use the wrong fasteners or load the fasteners incorrectly.
- CHECK FOR MISALIGNMENT OR BINDING OF MOVING PARTS, BREAKAGE OF PARTS, AND ANY OTHER CONDITION THAT MAY AFFECT THE TOOL'S OPERATION. If damaged, have the tool serviced before using. Many accidents are caused by poorly maintained tools
- CHECK SAFETY BEFORE USE. Make sure the safety operates properly. Never use the tool unless the safety is operating properly, otherwise the tool could drive a fastener unexpectedly. Do not tamper with or remove the safety, otherwise the safety becomes inoperable.
- DO NOT USE TOOL IF TRIGGER DOES NOT ACTUATE PROPERLY. Any tool that cannot be controlled with the trigger is dangerous and must be repaired.
- NEVER USE TOOL WHICH IS DEFECTIVE OR OPERATING ABNORMALLY. If the tool appears to be operating unusually, making strange noises, or otherwise appears defective, stop using it immediately and arrange for repairs by an authorized service center.
- MAINTAIN TOOLS WITH CARE. Keep the tool clean and lubricated for better and safer performance.
- NEVER CARRY THE TOOL BY AIR HOSE.
- STORE TOOLS OUT OF THE REACH OF CHILDREN AND OTHER UNTRAINED PEOPLE. Tools are dangerous in the hands of untrained users.
- PLACE TOOL PROPERLY ON WORKPIECE. Do not drive fasteners on top of other fasteners or with the tool at too steep of an angle; the fasteners can ricochet and hurt someone.
- . DO NOT USE THE TOOL AS A HAMMER.
- KEEP ALL SCREWS AND COVERS TIGHTLY IN PLACE.
- KEEP FACE, HANDS AND FEET AWAY FROM FIRING HEAD AT ALL TIMES. Never place your face, hands or feet near the firing head.
- DO NOT DISCONNECT AIR HOSE FROM TOOL WITH FINGER ON TRIGGER. The tool can fire when reconnected to an air supply.
- DO NOT LOAD FASTENERS WITH TRIGGER PULLED OR SAFETY DEPRESSED.
- NEVER PLACE A HAND OR ANY PART OF BODY IN FASTENER DISCHARGE AREA OF TOOL.
- DO NOT DRIVE FASTENERS INTO THIN BOARDS OR NEAR CORNERS AND EDGES OF WORKPIECE. The fasteners can be driven or a way from the workpiece hit someone.
- DISCONNECT AIR HOSE FROM TOOL WHEN:
  - 1). Doing maintenance and inspection:
  - 2). Turning the adjuster and top cover:
  - 3). Attaching or removing the no-mar tip:
  - 4). Clearing a jam:
  - 5). It is not in use:
  - 6). Leaving work area:
  - 7). Moving it to another location;
  - 8). Handing it to another person.

Never attempt to clear a jam or repair the tool unless you have disconnected air hose from the tool and removed all remaining fasteners from the tool. The tool should never be left unattended since people who are not familiar with the tool might handle it and injure themselves.

#### **TOOL SERVICE**

- USE ONLY ACCESSORIES THAT ARE IDENTIFIED BY THE MANUFACTURER FOR THE SPECIFIC TOOL MODEL.
- USE OF UNAUTHORIZED PARTS OR FAILURE TO FOLLOW MAINTENANCE INSTRUCTIONS MAY CREATE A RISK OF INJURY.
- USE ONLY THE LUBRICANTS SUPPLIED WITH THE TOOL OR SPECIFIED BY THE MANUFACTURE.
- TOOL SERVICE MUST BE PERFORMED ONLY BY QUALIFIED REPAIR PERSONNEL.

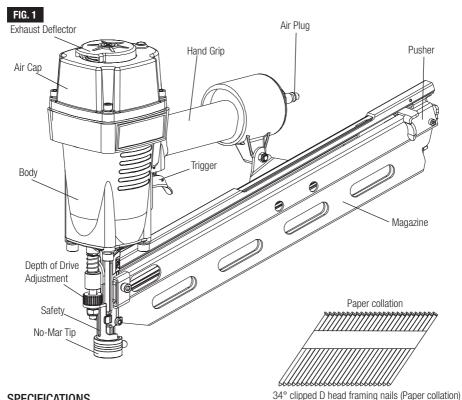

#### AIR SOURCE

- NEVER USE OXYGEN OR OTHER BOTTLED GASES AS
   A POWER SOURCE. Explosion may occur. Combustible
   gases and other bottled gases are dangerous and may
   cause the tool to explode.
- DO NOT EXCEED MAXIMUM RECOMMENDED AIR PRESSURE MARKED ON THE TOOL. Use only clean, dry, regulated, compressed air within the rated pressure range marked on the tool. Never connect the tool to pressure as which potentially exceeds 200PSI the tool can burst.
- DO NOT ABUSE THE AIR HOSE. Protect all hoses from kinks, restrictions, solvents or sharp objects. Keep air hose away from heat, oil, sharp edges or moving parts. Replace damaged hoses immediately. Damaged hoses can burst or whip around.
- CHECK ALL FITTINGS, HOSES, PIPES, CONNECTIONS
   AND COMPRESSOR BEFORE EACH USE OF THIS
   TOOL. Repair or replace damaged or leaking hoses
   and connections immediately. Damage to a hose or
   connection can cause a pressure hose to break and
   whip around the work area, and can lead to injury.

## FUNCTIONAL DESCRIPTION AND SPECIFICATIONS

## **WARNING**

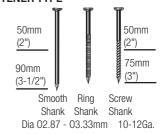

Disconnect the tool from the air source before making any adjustments, changing accessories or storing the tool. Such precautionary safety measures reduce the risk or unintentional tool operation.

#### **SPECIFICATIONS**

Normal Operating Pressure:	70-115PSI(0.5-0.8MPa)	
Maintenance:	Oiling	
Firing Mode:	Sequential Fire/Contact fire	
Fastener Size Range	2" - 3-1/2"(50-90mm)	

#### **FASTENER TYPE**

#### Product Size:

MODEL	LENGTH	WIDTH	HEIGHT	WEIGHT	MAGAZINE CAPACITY
CHFN35P	20.08"(510mm)	5.51"(140mm)	14.37"(365mm)	9.24lbs (4.2kg)	50 PC

#### **FEATURES**

- · Light weight, magnesium body reduces working fatigue.
- · Easy clear jam clearing.
- Tool free depth of drive.
- Fast fire speed.
- No-Mar tip protects work surface.

## ASSEMBLY/INSTALLATION

Follow the instructions below to prepare your tool for operation.

- All tool operators and their immediate supervisors must become familiar with the operator safety instructions before operating the tool.
- Included with each tool are one copy of these Operating/ Safety Instructions. Keep this publications for future reference.
- Install a filter, regulator, lubricator unit and moisture trap on your air delivery system per the manufacturer's instructions for these devices. Additionally, install a pressure gauge as close as practical to the tool, preferably within 10 feet (3 meters).
- Select hoses with a minimum inner diameter of 1/4 inch (6.4 mm) and a maximum length of 100 feet (30.5 meters).

## **A**WARNING

To reduce the risk of injury from a hose bursting, select hoses that are rated at least 200PSI.

Select fittings that are appropriately sized for the selected hoses. The tool and air hose must have a hose coupling such that all pressure is removed from the tool when the coupling joint is disconnected.

## **△WARNING**

Never use non relieving couplers and/or female quick disconnect couplings on the tool. Non relieving couplings and female couplings will trap high pressure air in the tool when the airline is disconnected. This will leave the tool charged with enough air after it has been disconnected to drive a nail. Only MALE pneumatic type air connectors should be fitted to the tool, so that high pressure air in the tool is vented to atmosphere as soon as the airline is disconnected.

Set the regulator at the air delivery system to a PSI that falls within the tool's operating range of 70-115PSI. The correct pressure is the lowest pressure that will do the job.

### **OPERATION**

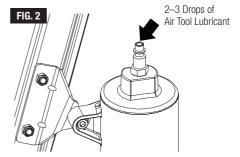

#### LUBRICATION

## **△**WARNING

USE ONLY THE AIR TOOL LUBRICANTS SUPPLIED WITH THE TOOL. Do not use other lubricants as they may damage the tool.

If the tool is not used with an in-line lubrication system on the air supply it is necessary to periodically lubricate the tool with air tool lubrication.

Under low use, lubricate once a day. Under heavy use, lubricate twice a day. To lubricate, insert 2-3 drops of lubricant into the air supply fitting attached to the tool handle (FIG 2). Using too much oil will cause it to collect in the tool and be noticeable in the exhaust.

Do not use detergent oil, WD-40, transmission fluid, motor oil, or other lubricants not specifically designated as air tool lubricants. These lubricants will cause accelerated wear to the seals, o-rings, and bumpers in the tool, resulting in poor tool performance and frequent maintenance.

#### ADJUSTING AIR PRESSURE

Adjust the air pressure at recommended operating pressure 70-115PSI according to the length of nails and the hardness of workpiece.

The correct air pressure is the lowest pressure which will do the job. Using the tool at a higher than required air pressure unnecessarily over stresses the tool. Don't exceed 115PSI.

FIG. 3

70PSI minimum

115PSI maximum

#### CONNECTING AIR SUPPLY

## **∆**WARNING

**Never use oxygen or other bottled gases as a power source.** Explosion may occur. Combustible gases and other bottled gases are dangerous and may cause the tool to explode.

## **≜**WARNING

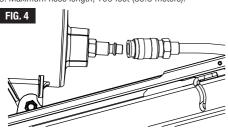

Never connect the tool to an air source that is capable of producing air pressure exceeding 200PSI. Excessive pressure can cause abnormal operation or cause the tool to burst, resulting in personal injury.

## **∆**WARNING

Do not exceed maximum recommended air pressure marked on the tool. Verify prior to using the tool that the air source has been adjusted within the rated air-pressure rang. Be sure the air pressure gauge is operating properly and check it at least twice a day. Tools operated in excess of their maximum pressure rating may operate abnormally or burst resulting in personal injury.

To connect the tool to the compressor only use pneumatic air hoses that meet the following criteria:

- 1. Minimum hose pressure rating, 200PSI.
- 2. Minimum hose inner diameter, 1/4 inch (6.4 mm).
- 3. Maximum hose length, 100 feet (30.5 meters).

#### Connect the air supply:

- Snap the air hose onto the guick connector.
- Check for air leakage. If leakage is noted, cease using the tool immediately and have the tool repaired by a qualified service technician.
- Be sure the air pressure gauge is operating properly and check it at least twice a day.

#### TOOL TESTING

## **Ananger**

OPERATORS AND OTHERS IN WORK AREA MUST WEAR SAFETY GLASSES WITH SIDE SHIELDS WHICH CONFORMS TO ANSI Z87.1 SPECIFICATIONS.

### **∴**WARNING

## NEVER USE TOOL UNLESS SAFETY IS OPERATING PROPERLY.

Before actually beginning the nailing work, test the tool by using the check list below. Conduct the test in the following order. If abnormal operation occurs, stop using the tool and have the tool repaired by a qualified service technician.

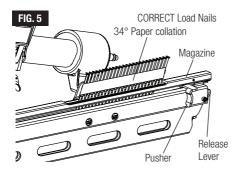

- 1. Disconnect air hose from tool. Remove all nails from tool.
  - ALL SCREWS MUST BE TIGHTENED. If any screws are loose, tighten them.
  - THE SAFETY AND TRIGGER MUST MOVE SMOOTHLY.
- Adjust the air pressure to 70PSI, connect the air hose. Do not load any nails in the tool.
  - THE TOOL MUST NOT LEAK AIR.
- Remove the finger from the trigger and press the safety against the wood.
  - THE TOOL MUST NOT OPERATE.
- Separate the safety from the wood. Next, point the tool downward, pull the trigger and then wait in that position for 5 seconds or longer.
  - THE TOOL MUST NOT OPERATE.
- a. Without touching the trigger, depress the safety against the workpiece. Pull the trigger.
  - THE TOOL MUST OPERATE
  - Hold the trigger back while separating the safety from the wood.
    - The tool will remain in operated status(the driver blade will remain at the bottom).
  - c. Remove the finger from the trigger.
     Tool operation will end (the driver blade will return to the too).
- If no abnormal operation is observed, you may load nails in the tool. Drive nails into the workpiece that is the same type to be used in the actual application.
  - THE TOOL MUST OPERATE PROPERLY.

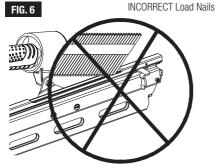

#### NAIL LOADING

## **△WARNING**

When loading the tool's magazine, check that the nail tips contact the wear rail and slide smoothly against the surface of the magazine. If the nails are not loaded properly, the tool will misfire and nails can be deflected, causing the tool to react in an unexpected manner, and damage the tool.

- 1. Connect air supply.
- 2. Hold tool handgrip securely, and pull pusher back until it locks in latched position at rear of magazine.
- Insert nail strip into magazine, with nail points angled forward and down.
- Pull push back, press release lever, and slide pusher forward against nails.
- 5. Tool is now loaded and ready for normal operation.

#### METHODS OF OPERATION

This tool is equipped with the safety and does not operate unless the safety is depressed.

There are two methods of operation to drive nails with this tool. They are:

- 1. Sequential fire
- 2. Contact fire (red trigger)

#### SEQUENTIAL FIRE

- Position the nail outlet on the workpiece with finger off the trigger.
- 2. Depress the safety firmly until it is completely depressed.
- 3. Pull the trigger to drive a nail
- 4. Remove finger from the trigger.

To continue nailing a separate location, move the tool along the wood, repeating steps (2-4) as required.

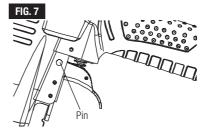

#### CONTACT FIRE

## **∆**WARNING

To avoid double firing or accidental firing due to recoil.

- Do not press the tool against the wood with excessive force
- Separate the tool from the wood as it recoils after nailing.

- 1. Disconnect the tool from the air repetitive.
- 2. Remove the O-Ring from the trigger pin (FIG. 7).
- 3. Pull the trigger out.
- 4. Put the red trigger on.
- Push the trigger pin back, using a little hammer if necessary.
- 6. Put the O-Ring back to fasten the trigger pin.
- Grip the tool firmly to maintain control. Position the nose of the tool onto the work surface.
- Squeeze and hold the trigger, push the tool against the work surface to depress the workpiece contact and drive a nail.

#### CONTACT TRIGGER LOAD

- 1. Pull the trigger with the tool off the workpiece.
- 2. Depress the safety against the workpiece to drive a nail.
- Move the tool along the workpiece with bouncing motion. Each depression of the safety will drive nail. As soon as the desired number of nails have been driven, remove finger from the trigger.

#### NOTE:

- Always handle nails and package carefully. If nails are dropped, collating bent may be broken, which will cause mis-feeding and jamming.
- · After nailing:
  - 1. Disconnect air hose from the tool.
  - 2. Remove all nails from the tool.
  - 3. Supply 5-10 drops of pneumatic tool lubricant into the air plug on the tool.
  - 4. Open the petcock on the air compressor tank to drain any moisture

#### COLD WEATHER OPERATION

## **△**WARNING

**DO NOT USE A FROZEN TOOL.** Allow tool to thaw before using. Moisture frozen in the tool may impede internal components resulting in the risk of injury and/or tool damage.

When using the tool in cold conditions the tool will cycle slower than usual while driving the first nails. The cycle rate will increase as the tool warms up. Keep tool warm to avoid reduced cycle rate.

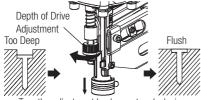

#### ADJUSTING THE NAILING DEPTH

## **△WARNING**

Disconnect the tool from the air source before making adjustments. Such precautionary safety measures reduce the risk or unintentional tool operation.

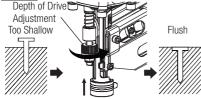

- 1. Disconnect tool from air supply.
- 2. Remove nails from the tool.
- 3. Adjust tool driving depth:
  - To reduce the nail depth, turn the adjustment knob counter clockwise (FIG 8).
  - To drive the nail deeper, turn the adjustment knob clockwise (FIG 9).
- Reload nails as described in the "Loading Nails" section of this manual.
- 5. Reconnect air supply.

## FIG. 8

Turn the adjustment knob counter clockwise

Turn the adjustment knob clockwise

#### ADJUSTING THE EXHAUST

The direction of the exhaust vent can be changed by turning the top cover (FIG 10).

#### USING THE NO-MAR TIP

## **∆**WARNING

When attaching or detaching the No-Mar Tip, be sure to remove your finger from the trigger and disconnect the air hose from the nailer.

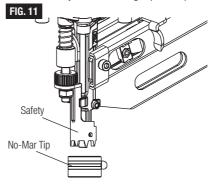

If you like to protect the surface of workpiece against scratches or markings made by the safety, attach the accessory No-Mar Tip to the safety.

#### To replace the No-Mar Tip:

- 1. Disconnect air hose from tool.
- 2. Put the No-Mar Tip to the toe of the safety.

To remove the No-Mar Tip: Pull the no mar tip directly away from tool

**NOTE:** The nose cap may reduce nailing depth due to its thickness. Re-adjustment of nailing depth is required.

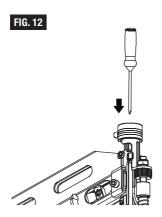

## **MAINTENANCE**

#### JAM CLEARING

If a nail becomes jammed in the tool, disconnect the air hose and keep the tool pointed away from you while clearing the jam.

- 1. Disconnect the tool from the air supply.
- 2. Remove nails from the tool.
- 3. Insert screwdriver into the driving mechanism.
- Tap the screwdriver gently with a hammer. The inserted screwdriver should push the driver blade back, freeing the nail jam
- Remove the bent nail, using needle-nose pliers if necessary.
- 6. Reconnect the tool to the air supply.
- 7. Reload the tool with nails.

#### **CLEANING**

### **↑**WARNING

When cleaning a tool be careful not to disassembly any portion of the tool since internal components may be misplaced or safety components may be improperly mounted. Certain cleaning agents such as gasoline, carbon tetrachloride, ammonia. etc. may damage plastic parts and o-rings.

## **△WARNING**

Do not attempt to clean by inserting pointed objects through openings. Sharp edges may damage internal components causing a serious hazard.

Ventilation openings, the work contact element, and the trigger must be kept clean and free of foreign matter. Periodically clean the tool with compressed air.

Clean the magazine. Remove metal or wooden chips which may have accumulated in the magazine. Periodically clean magazine with compressed air.

#### **STORAGE**

## **△WARNING**

Keep out of reach of children and personnel unfamiliar with tool operation. Lock the storage area. Tools are dangerous in the hands of personnel unfamiliar with the tool.

When not in use, the tool should be disconnected and stored in the storage case in a warm and dry place. When tool will not be in use for an extended period, apply a thin coat of the lubricant to the steel parts to avoid rust.

Do not store the tool in a cold weather environment.

## HOOKUP INSTRUCTIONS FOR TOOL TO AIR SUPPLY

#### NOTE:

For better performance, install a 3/8 inch quick plug (1/4 inch NPT threads) with an inside diameter of 0.315 inch (8mm) on the nailer and a 3/8 inch quick coupler on the air hose.

- With ON/OFF switch in OFF position, plug compressor into electrical outlet.
- Close pressure regulator by turning all the way to the left. Turn compressor ON and let it pump all the way up to automatic shut-off pressure.
- Attach air hose to regulator outlet. Adjust pressure regulator by turning to the right so that outlet pressure is between 70PSI to 115PSI.
- 4. Load fasteners into nailer.
- Point the nailer in a safe direction while attaching to air hose.
- 6. Nailer is ready for use. You may need to adjust outlet pressure to achieve proper fastener depth.

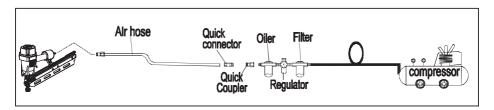

## RECOMMENDED HOOKUP

# MINIMUM COMPONENTS REQUIRED FOR HOOKUP

**Air compressor:** The air compressor must be able to maintain a minimum of 70PSI when the nailer is being used. An inadequate air supply can cause a loss of power and inconsistent driving.

**Pressure regulator:** A pressure regulator is required to control the operating pressure of the nailer between 70PSI and 115PSI.

Air supply hose: Always use air supply hoses with a minimum working pressure rating equal to or greater than the pressure from the power source, or 150PSI, whichever is greater. Use 1/4 inch air hose for runs up to 50 feet (15.2 meters). Use 3/8 inch air hose for 50 feet (15.2 meters), run or longer.

## **TROUBLE SOLVING**

PROBLEMS	POSSIBLE CAUSES	SUGGESTED SOLUTIONS	
Air leaking near the top of the tool or in	Loose screws.	1. Tighten screws.	
the trigger area.	2. Worn or damaged O-rings or seals.	2. Install overhaul kit.	
Air leaking near the bottom of the tool	Loose screws.	1. Tighten screws.	
	2. Worn or damaged O-rings or seals.	2. Install overhaul kit.	
Tool dose nothing or operates sluggishly	Inadequate air supply.	1. Make sure the air compressor is set between 70PSI and 115PSI.	
	2. Tool is too dry.	2. Add about 2-3 drops of lubrication into the air connector.	
	3. Exhaust blocked.	3. Clean exhaust channel.	
	4. Worn or damaged O-rings or seals.	4. Install overhaul kit.	
Fasteners are jammed in the tool	Driver channel is worn.	1. Fix the drive channel.	
frequently	2. Piston is broken or worn.	2. Replace the piston.	
	3. Bent fasteners.	3. Remove the bent fasteners, replace with the right fasteners.	
	4. Dirty magazine.	4. Clean magazine.	
	5. Loose magazine.	5. Tighten screws.	
	6. Wrong fasteners	6. Verify that fasteners are the correct size.
